Introduction

The *Report Card on Ontario's Elementary Schools 2024* (hereafter, *Report Card*) collects a variety of relevant, objective indicators of school performance into one, easily accessible public document so that anyone can analyze and compare the performance of individual schools. By doing so, the *Report Card* assists parents when they choose a school for their children and encourages and assists all those seeking to improve their schools.

The Report Card helps parents choose

Where parents can choose among several schools for their children, the *Report Card* provides a valuable tool for making a decision. Because it makes comparisons easy, it alerts parents to those nearby schools that appear to have more effective academic programs. Parents can also determine whether schools of interest are improving over time. By first studying the *Report Card*, parents will be better prepared to ask relevant questions when they visit schools under consideration and speak with the staff.

Of course, the choice of a school should not be made solely on the basis of a single source of information. Web sites maintained by [Ontario's Education Quality and Accountability Office \(EQAO\)](#),¹ the provincial ministry of education, and local school boards may also provide useful information.² Parents who already have a child enrolled at the school provide another point of view.

Naturally, a sound academic program should be complemented by effective programs in areas of school activity not measured by the *Report Card*. Nevertheless, the *Report Card* provides a

detailed picture of each school that is not easily available elsewhere.

The Report Card facilitates school improvement

The act of publicly rating and ranking schools attracts attention, and this can provide motivation. Schools that perform well or show consistent improvement are applauded. Poorly performing schools generate concern, as do those whose performance is deteriorating. This inevitable attention provides an incentive for all those connected with a school to focus on student results.

However, the *Report Card* offers more than just incentive. It includes a variety of indicators, each of which reports results for an aspect of school performance that may be improved. School administrators who are dedicated to their students' academic success accept the *Report Card* as another source of opportunities for improvement.

Some schools do better than others

To improve a school, one must believe that improvement is achievable. This *Report Card*, like other report cards from the Fraser Institute, provides evidence about what can be accomplished. It demonstrates clearly that, even when we take into account factors such as the students' family income—which some believe dictate the degree of academic success that students can enjoy in school—some schools do better than others. This finding confirms the results of research carried out in other countries.³ Indeed, it will come as no great surprise to experienced parents and educators that the data consistently suggest that what goes on in the schools makes

a difference to academic results and that some schools make a greater difference than others.

Comparisons are at the heart of the improvement process

By comparing a school's latest results with those of earlier years, we can see if the school is improving. By comparing a school's results with those of neighbouring schools or schools having similar school and student characteristics, we can identify more successful schools and learn from them. Reference to overall provincial results places an individual school's level of achievement in a broader context.

There is great benefit in identifying schools that are particularly effective. By studying the techniques

used in schools where students are successful, less effective schools may find ways to improve.

Comparisons are at the heart of improvement: making comparisons among schools is made simpler and more meaningful by the *Report Card's* indicators, ratings, and rankings.

You can contribute to the development of the *Report Card*

The *Report Card* program benefits from the input of interested parties. We welcome your suggestions, comments, and criticisms. Please contact max.shang@fraserinstitute.org.

Key academic indicators of school performance

The foundation of the *Report Card* is an overall rating of each school's academic performance. We base our *Overall rating out of 10* on the school's performance on nine indicators, all of which are derived from province-wide tests of reading, writing, and mathematics skills that are developed and managed by the province's Education Quality and Accountability Office (EQAO).⁴

- (1) average level of achievement on the grade-3 EQAO assessment in reading;
- (2) average level of achievement on the grade-3 EQAO assessment in writing;
- (3) average level of achievement on the grade-3 EQAO assessment in mathematics;
- (4) average level of achievement on the grade-6 EQAO assessment in reading;
- (5) average level of achievement on the grade-6 EQAO assessment in writing;
- (6) average level of achievement on the grade-6 EQAO assessment in mathematics;
- (7) the difference between male and female students in their average levels of achievement on the EQAO assessment in grade-6 reading;
- (8) the difference between male and female students in their average levels of achievement on the EQAO assessment in grade-6 mathematics;
- (9) the percentage of EQAO assessments that did not meet the provincial standard.

We have selected this set of indicators because they provide systematic insight into a school's performance. Because they are based on annually generated data, we can assess not only each school's performance in a year but also its improvement or deterioration over time.

Indicators of effective teaching

Average levels of achievement on EQAO's assessments

These indicators—in the tables, *Grade 3 avg. level* and *Grade 6 avg. level*—show the average level of proficiency achieved by the school's students on the uniform EQAO assessments in reading, writing, and mathematics at the grade-3 and grade-6 levels. The EQAO converts the raw score on each test into a level of achievement from 1 to 4. Achievement at Levels 1 and 2 suggest that the student has not yet met the provincial standard. Level 3 is considered the provincial standard and Level 4 represents achievement well above the provincial standard. Achievement at Level 3 or 4 suggests that students are well prepared for work at the next grade.

In order to calculate the average level achieved by the students at a school on any given test, a numerical value was given to each level of achievement. Thus, Level 1 was given a value of 1 for purposes of determining the average; Level 2, a value of 2; Level 3, a value of 3; and Level 4, a value of 4. A value of 0 was given in those cases where a student completed the test but did not demonstrate sufficient understanding to be assigned achievement Level 1.

Fundamental to the mission of elementary schools is teaching students sound basic skills in reading, writing, and mathematics. Basic literacy and numeracy

cy are essential building blocks for life-long learning. The tests upon which the *Report Card* is based assess students on these dimensions. Differences among students in abilities, motivation, and work habits will inevitably have some impact upon the final results. There are, however, recognizable differences from school to school within a district in the average results on the EQAO's tests. There is also variation within schools in the results obtained in different subject areas and at different grades. Such differences in outcomes cannot be wholly explained by the individual and family characteristics of the school's students. It seems reasonable, therefore, to include the average test marks in these three critical subject areas as indicators of effective teaching.

Percentage of EQAO tests below standard

For each school, this indicator—in the tables *Tests below standard (%)*—provides the rate of failure to meet the provincial standard on the EQAO's tests. It was derived by dividing the total number of all the above tests that provided enough information to enable the calculation of a score but that did not meet the provincial standard, by the total number of such tests written by the students at the school.

Since reading, writing, and mathematics are critical to students' further intellectual and personal development, students should, at the minimum, demonstrate that they meet the accepted standard of performance for their grade in these subject areas. Schools have the responsibility of ensuring that their students are adequately prepared to do so.

How well do the teachers take student differences into account?

The Gender gap indicators

The Gender gap indicators—in the tables *Gender gap (level)*—use the grade-6 results of the EQAO's assessments to determine how successful the school has been in narrowing the achievement gap between male and female students in reading and mathematics.⁵ These indicators are determined, for each subject area, by

calculating the absolute value of the difference between male and female students in their average level of achievement. The difference is reported along with the more successful sex in the detailed tables.

Undoubtedly, some personal and family characteristics, left unmitigated, can have a deleterious effect on a student's academic development. The *Report Card* provides evidence that successful teachers overcome such impediments. By comparing the results of male and female students in two subject areas—reading and mathematics—in which one group or the other may have enjoyed a historical advantage, we are able to gauge the extent to which schools provide effective teaching to all of their students.

In general, how is the school doing academically compared to other schools in the Report Card?

The Overall rating out of 10

While each of the indicators is important, it is almost always the case that any school does better on some indicators than on others. So, just as a teacher must make a decision about a student's overall performance, we need an overall indicator of school performance—in the tables *Overall rating out of 10*. Just as teachers combine test scores, homework, and class participation to rate a student, we have combined the indicators to produce an overall rating. The overall rating of school performance answers the question, "In general, how is the school doing academically, compared to other schools in the *Report Card*?"

To derive this rating, the results for each of the nine indicators, for each school year, were first standardized. Standardization is a statistical procedure whereby sets of raw data with different characteristics are converted into sets of values sharing certain statistical properties. Standardized values can readily be combined and compared. The standardized data were then weighted and combined to produce an overall standardized score. Finally, this score was converted into an overall rating out of 10. It is from this *Overall rating out of 10* that the school's provincial rank is determined.

Note that the Overall rating out of 10, based as it is on standardized scores, is a relative rating. That is, it measures each school's performance compared to all the other schools in the *Report Card*. Thus, even though a school receives an overall rating of 10, it is very likely that it can still improve. An overall rating of zero means that on average, on the report card's indicators, no school in the *Report Card* performed more poorly. However, it does not mean that the lowest performing school has accomplished nothing for its students.

Further, because it is a relative measure, in order for a school to show improvement in its Overall rating out of 10, it must improve faster than the average. If it improves, but at a rate lower than the average, it will show a decline in its rating.

For schools where there were fewer than 10 test results for boys or for girls, no values for the *Gender gap* indicators can be provided. In these cases the *Overall rating out of 10* is derived using the remaining indicators. (See the Appendix for an explanation of the calculation of the *Overall rating out of 10*.)

Other indicators of school performance

The *Report Card* includes other indicators that, while they are not used to derive the *Overall rating out of 10*, add more information on the school's effectiveness.

The *Tests not written* indicator

Schools that administer the EQAO's assessments are expected to ensure that all their students write the tests. Higher participation rates provide the benefit of objective assessment of learning to more students and parents. They also provide a more accurate reflection of the level of achievement at the school. A reader can have more confidence that the test results are a true reflection of the school's average achievement level if all, or almost all, of its students write the tests.

The indicator of tests not written—in the tables *Tests not written (%)*—was determined by first summing, for each of the six test sittings, the total number of students for whom no test data were submitted or who were exempt from testing. The six sums were then totaled. This result was then divided by the total number of tests that could have been completed if all students had fully participated in all of the tests that were administered at the school.

The principal of a school at which a relatively large percentage of students did not complete the tests should be able to provide good reasons for the students' failure to do so and a well-developed plan to increase participation in future test sittings.

The *Trend* indicator

Is the school improving academically? The Report Card provides five years of data for most schools.

Unlike a simple snapshot of one year's results, this historical record provides evidence of change (or lack thereof) over time. To detect trends in the performance indicators, we developed the Trend indicator.

This indicator uses statistical analysis to identify those dimensions of school performance in which there has likely been real change rather than a fluctuation in results caused by random occurrences. To calculate the trends, the standardized scores rather than rawdata are used. Standardizing makes historical data more comparable and the trend measurement more reliable. Because calculation of trends is uncertain when only a small number of data points is available, a trend is indicated only in those circumstances where five years of data are available and where the trend is statistically significant. For this indicator, we have defined the term "statistically significant" to mean that, nine times out of 10, the change that is noted is real; that is, it did not happen just by chance.

The student characteristics indicators

For each school, the *Report Card* notes the percentage of its students who are enrolled in ESL programs or who have certain identified special needs. As was noted in the Introduction, it is sometimes useful to compare a school's results to those of similar schools. These two indicators can be used to identify schools with similar student body characteristics. A variety of comparisons between schools can be made on the Fraser Institute's school rankings website, <www.compareschoolrankings.org>

Notes

- 1 The Education Quality and Accountability Office (EQAO) is an arm's-length agency of the provincial government. It provides parents, teachers, and the general public with information about student achievement. For more information, see the EQAO's web site at <<http://www.eqao.com/>>.
- 2 See, for instance the Ministry of Education's web site at <<http://www.edu.gov.on.ca>>, or the web site of the Toronto Catholic District School Board at <<http://www.tcdsb.org/>>.
- 3 See, for instance, Michael Rutter et al., *Fifteen Thousand Hours: Secondary Schools and Their Effects on Children* (Cambridge, MA: Harvard University Press, 1979) and Peter Mortimore et al., *School Matters: The Junior Years* (Wells, Somerset: Open Books, 1988).
- 4 The EQAO's test results, student enrolment data, and school information used or reported in this publication were provided by the Ontario Ministry of Education. The results or views expressed in this publication are those of the authors and are not those of the Ontario Ministry of Education.
- 5 For a discussion of gender-based differentials in academic achievement, see Peter Cowley and Stephen Easton, *Boys, Girls, and Grades: Academic Gender Balance in British Columbia's Secondary Schools*. Public Policy Sources 22 (Vancouver, BC: The Fraser Institute, 1999).

How does your school stack up?

Important notes to the rankings

In this table, schools are ranked (on the left hand side of the page) in descending order (from 1 to 3105) according to their academic performance as measured by the Overall rating out of ten (shown on the right hand side of the table) for the school year 2022/2023. Each school’s five-year average ranking and Overall rating out of ten are also listed. The higher the overall rating (out of 10), the higher the rank awarded to the school. Where schools tied in the overall rating, they were awarded the same rank. Where less than five years of data was available “n/a” appears in the table.

Not all the region’s elementary schools are included in the tables or the ranking. In some school districts that operate middle schools or junior high schools, the elementary schools may not enroll students in grade 6. Since the Report Card is based on the results of tests given in grades 3 and 6, these elementary schools cannot be included. In addition,

schools at which fewer than 10 students were enrolled in each of these grades are excluded. Private schools and First Nations operated, federally funded schools are not required to administer the EQAO tests. Since the results of these tests form the basis for this Report Card, only those schools that administer the EQAO tests could be included. Finally, also excluded are schools that did not generate a sufficiently large set of student data to enable the calculation of an Overall rating out of 10.

The exclusion of a school from the Report Card should in no way be construed as a judgement of the school’s effectiveness.

IMPORTANT: In order to get the most from the Report Card, readers should consult the complete table of results for each school of interest. By considering several years of results—rather than just a school’s rank in the most recent year—readers can get a better idea of how the school is likely to perform in the future.

Appendix: Calculating the Overall rating out of 10

The *Overall rating out of 10* is intended to answer the question, “In general, how is the school doing academically compared to other schools in the *Report Card*?” The following is a simplified description of the procedure used to convert the data received from the EQAO into the *Overall rating out of 10*.

- 1 Subject by subject, the *Average levels* and *Tests below standard* values for each school were standardized by calculating Z , which is defined by:

$$Z = (X - \mu) / \sigma$$

where X is the individual school’s result, μ is the mean of the all-schools distribution of results, and σ is the standard deviation of the same all-schools distribution.

- 2 The subject-by-subject standardized data for *Tests below standard* were then aggregated to produce a weighted average standardized value. The weighting used was the number of student writers in each subject relative to the total number of student writers of the relevant tests.
- 3 This weighted average result for *Tests below standard* was then re-standardized.
- 4 The *Gender gap* values in grade-6 reading and mathematics were each calculated by determining the absolute value of the difference in the level of achievement of male students and female students at the school. The results for each subject were then standardized.
- 5 The nine standardized indicator results were then combined to produce a weighted average summary standardized score for the school. The weightings used in these calculations were: *Standardized weighted average of the standardized results of the six tests* — 50%; *Gender gap* for each of the grade-6 reading and grade-6 mathematics tests: 10%; *Tests below standard* — 30%. For schools for which there were no gender gap results, the weightings used were: *Standardized weighted average of the standardized results of the six tests* — 62.5%; *Tests below standard* — 37.5%.
- 6 This summary standardized score was re-standardized.

This standardized score was converted into an overall rating between 0 and 10 as follows:

- 7 The allowable maximum and minimum standardized scores were set at 2.2 and -3.29 respectively. Scores equal to, or greater than, 2.2 receive an overall rating of 10. This cut-off was chosen because it allows more than one school in a given year to be awarded 10 out of 10. Scores of equal to, or less than, -3.29 receive the lowest overall rating of 0. Schools with scores below -3.29 are likely to be outliers, a statistical term used to

denote members of a population that appear to have characteristics substantially different from the rest of the population. We chose, therefore, to set the minimum score so as to disregard such extreme differences.

- 8 The resulting standardized scores were converted into *Overall ratings out of 10* according to the formula:

$$OR = \mu + (\sigma * StanScore)$$

where OR is the resulting *Overall rating out of 10*, μ is the average calculated according to the formula:

$$\mu = (OR_{min} - 10 (Z_{min} / Z_{max})) / (1 - (Z_{min} / Z_{max}))$$

where σ is the standard deviation calculated according to the formula:

$$\sigma = (10 - \mu) / Z_{max}$$

and StanScore is the standardized score calculated in (6) above and adjusted as required for minimum and maximum values as noted in (7) above. As noted in (7) above, OR_{min} equals zero, Z_{min} equals -3.29 ; and Z_{max} equals 2.2 .

- 9 Finally, the derived *Overall rating out of 10* is rounded to one place of the decimal to reflect the significant number of places of the decimal in the original raw data.

Note that the *Overall rating out of 10*, based as it is on standardized scores, is a relative rating. That is, in order for a school to show improvement in its *Overall rating out of 10*, it must improve more than the average. If it improves, but at a rate less than the average, it will show a decline in its rating.

About the authors

Peter Cowley

Peter Cowley is a Senior Fellow and former Director of School Performance Studies at the Fraser Institute. He has a B.Comm. from the University of British Columbia (1974). In 1994, Mr Cowley independently wrote and published *The Parent's Guide*, a popular handbook for parents of British Columbia's secondary-school students. The Parent's Guide web site replaced the handbook in 1995. In 1998, Mr Cowley was co-author of the Fraser Institute's *A Secondary Schools Report Card for British Columbia*, the first of the Institute's continuing series of annual reports on school performance. This was followed by *The 1999 Report Card on British Columbia's Secondary Schools, Boys, Girls, and Grades: Academic Gender Balance in British Columbia's Secondary Schools*, and *The 1999 Report Card on Alberta's High Schools*. Since then, Mr Cowley has co-authored all of the Institute's annual Report Cards. Annual editions now include Report Cards on elementary and secondary schools in British Columbia, Alberta, and Ontario and on secondary schools in Quebec.

Joel Emes

Joel Emes is President of Abacus Economics and a Fraser Institute Senior Fellow who rejoined the Institute after a stint as a senior advisor to British Columbia's provincial government. He previously served as a senior analyst, then as acting executive director, at the BC Progress Board. Prior to that, Joel was a senior research economist at the Fraser Institute where he initiated and led several flagship projects in the areas of tax freedom and government performance, spending, debt, and unfunded liabilities. Joel holds a B.A. and an M.A. in economics from Simon Fraser University.

Max Shang

Max Shang is an Economist at the Fraser Institute. Prior to joining the Institute, Max worked for the Food and Agriculture Organization of the United Nations as a statistician and University of Guelph as senior research associate. His past research work has been published in leading peer-reviewed academic journals including *Canadian Journal of Agricultural Economics* and *Computational Statistics*. During his Ph.D. study, Max developed two more efficient statistical methods for calculating insurance premium. He holds a Ph.D. in Food, Agricultural and Resource Economics from the University of Guelph.

Publishing information

Distribution

These publications are available from <<http://www.fraserinstitute.org>> in Portable Document Format (PDF) and can be read with Adobe Acrobat® 7 or Adobe Reader®, versions 7 or later. Adobe Reader® X, the most recent version, is available free of charge from Adobe Systems Inc. at <<http://get.adobe.com/reader/>>. Readers who have trouble viewing or printing our PDF files using applications from other manufacturers (e.g., Apple's Preview) should use Reader® or Acrobat®.

Purpose, funding, & independence

The Fraser Institute provides a useful public service. We report objective information about the economic and social effects of current public policies, and we offer evidence-based research and education about policy options that can improve the quality of life.

The Institute is a non-profit organization. Our activities are funded by charitable donations, unrestricted grants, ticket sales, and sponsorships from events, the licensing of products for public distribution, and the sale of publications.

All research is subject to rigorous review by external experts, and is conducted and published separately from the Institute's Board of Directors and its donors.

The opinions expressed by the authors are those of the individuals themselves, and do not necessarily reflect those of the Institute, its Board of Directors, its donors and supporters, or its staff. This publication in no way implies that the Fraser Institute, its directors, or staff are in favour of, or oppose the passage of, any bill; or that they support or oppose any particular political party or candidate.

As a healthy part of public discussion among fellow citizens who desire to improve the lives of people through better public policy, the Institute welcomes evidence-focused scrutiny of the research we publish, including verification of data sources, replication of analytical methods, and intelligent debate about the practical effects of policy recommendations.

About the Fraser Institute

Our mission is to improve the quality of life for Canadians, their families and future generations by studying, measuring and broadly communicating the effects of government policies, entrepreneurship and choice on their well-being.

Notre mission consiste à améliorer la qualité de vie des Canadiens et des générations à venir en étudiant, en mesurant et en diffusant les effets des politiques gouvernementales, de l'entrepreneuriat et des choix sur leur bien-être.

Peer review—validating the accuracy of our research

The Fraser Institute maintains a rigorous peer review process for its research. New research, major research projects, and substantively modified research conducted by the Fraser Institute are reviewed by a minimum of one internal expert and two external experts. Reviewers are expected to have a recognized expertise in the topic area being addressed. Whenever possible, external review is a blind process.

Commentaries and conference papers are reviewed by internal experts. Updates to previously reviewed research or new editions of previously reviewed research are not reviewed unless the update includes substantive or material changes in the methodology.

The review process is overseen by the directors of the Institute's research departments who are responsible for ensuring all research published by the Institute passes through the appropriate peer review. If a dispute about the recommendations of the reviewers should arise during the Institute's peer review process, the Institute has an Editorial Advisory Board, a panel of scholars from Canada, the United States, and Europe to whom it can turn for help in resolving the dispute.
