Executive Summary

Economic Freedom of North America in 2018

Economic Freedom of North America 2020 is the sixteenth edition of the Fraser Institute's annual report. This year it measures the extent to which—in 2018, the year with the most recent available comprehensive data—the policies of individual provinces and states were supportive of economic freedom, the ability of individuals to act in the economic sphere free of undue restrictions. There are two indices: one that examines provincial/state and municipal/local governments only and another that includes federal governments as well. The former, our subnational index, is for comparison of individual jurisdictions within the same country. The latter, our all-government index, is for comparison of jurisdictions in different countries.

For the subnational index, *Economic Freedom of North America* employs 10 variables for the 92 provincial/state governments in Canada, the United States, and Mexico in three areas: 1. Government Spending; 2. Taxes; and 3. Labor Market Freedom. In the case of the all-government index, we incorporate three additional areas at the federal level from *Economic Freedom of the World* (EFW): 4. Legal Systems and Property Rights; 5. Sound Money; and 6. Freedom to Trade Internationally; and we expand Area 1 to include government investment (variable 1C in EFW), Area 2 to include top marginal income and payroll tax rate (variable 1Dii in EFW), and Area 3 to include credit market regulation and business regulations (also at the federal level). These additions help capture restrictions on economic freedom that are difficult to measure at the provincial/state and municipal/local level.

Results for Canada, the United States, and Mexico

The all-government index

The all-government index includes data from *Economic Freedom of the World* (Gwartney, Lawson, Hall, and Murphy, 2020) which is only available on the national level. These data enable us to make better comparisons among Canadian, Mexican, and US subnational jurisdictions by taking into account national policies that affect all jurisdictions within each country. Canada and the United States have similar scores in the EFW report and are both typically in the top 10 nations. Mexico ranks much lower, at 68th this year, though that is an improvement over past years.

The top jurisdiction is New Hampshire at 8.16, followed by Florida and Idaho at 8.10, then Wyoming (8.09) and Utah (8.08). Alberta is the highest ranking Canadian

province, tied for 9th place with a score of 8.06. The next highest Canadian province is British Columbia in 27th at 7.98. Alberta had spent seven years at the top of the index but fell out of the top spot in the 2018 report (reflecting 2016 data). In 2015, Albertans elected new political leaders who made changes in taxation, spending, and regulation that had a negative effect on economic freedom. In 2019, Albertans elected politicians who reversed the course of policy and it will be interesting to see what impact this will have on the province's level of economic freedom in future years.

The highest-ranked Mexican state is Jalisco with 6.70, followed by Tlaxcala (6.66) and Mexico (6.62). They are nearly a full point behind those ranking lowest in Canada and the United States, although that gap has been shrinking. The lowest-ranked state is Ciudad de México at 5.77; slightly better are Colima at 5.95, and Tamaulipas at 6.20.

The four lowest-ranked Canadian provinces are all within less than one tenth of a point of each other and are behind all 50 US states. The province of Newfoundland & Labrador and nearby Prince Edward Island are tied for 59th with 7.61, just behind Nova Scotia (58th) at 7.66, and New Brunswick (57th) at 7.67. The lowest-ranked states in the United States are Delaware at 7.72 in 56th place, following Rhode Island (7.76 in 54th) and New York (7.77 in 53rd).

Historically, average economic freedom in all three countries peaked in 2004 at 7.70 then fell steadily to 7.21 in 2011. Canadian provinces saw the smallest decline, only 0.20, whereas the decline in the United States was 0.48 and, in Mexico, 0.59. Since then it has risen slowly to 7.40 but still remains below that 2004 peak. However, economic freedom has increased in the United States and Mexico since 2013. In contrast, in Canada, after an increase in 2014, it has fallen back below its 2013 level.

The subnational indices

For the purpose of comparing jurisdictions within the same country, the subnational indices are the appropriate choice. There is a separate subnational index for each country. In Canada, the most economically free province in 2018 was again Alberta with 6.61, followed by British Columbia with 5.98, and Ontario at 5.16. However, the gap between Alberta and second-place British Columbia continues to shrink, down from 2.28 points in 2014 to 0.63 in 2018. The least free by far was Quebec at 2.84, following New Brunswick at 4.08, and Nova Scotia at 4.20.

In the United States, the most economically free state was New Hampshire at 7.84, followed by Florida at 7.73. Virginia is third at 7.62; Texas is fourth at 7.61; and Tennessee is fifth at 7.55. (Note that since the indexes were calculated separately for each country, the numeric scores on the subnational indices are not directly comparable across countries.) The least-free state was New York at 4.25, following West Virginia at 4.50. Alaska was 48th at 4.67, California was 47th at 4.71, and Vermont was 46th at 5.08.

In Mexico, the most economically free state was Jalisco at 6.57. Michoacán de Ocampo was second at 6.39, followed by Baja California at 6.04. The least free Mexican states were Zacatecas at 2.77, Campeche at 2.78, and Tabasco at 3.44

In addition to the tables found in chapter 3, our new interactive website at www.freetheworld.com contains all the latest scores and rankings for each of the components of the index as well as historical data on the overall and area scores. The full dataset is also available for download at that same website.

Economic freedom and economic well-being at the subnational level

The jurisdictions in the least economically free quartile (one fourth) on the all-government index had, in 2018, an average per-capita income of just US\$2,277, compared to US\$50,645 for the most economically free quartile. On the subnational index, the same relationship holds, with the least-free quartile having an average per-capita income 8.1% below the national average, while the most-free quartile was over 4.6% above it.

In addition, economic freedom at the subnational level has generally been found to be positively associated with a variety of measures of the per-capita size of the economy and the growth of the economy as well as various measures of entrepreneurial activity. There are now more than 310 articles by independent researchers examining subnational economic freedom using the data from *Economic Freedom of North America*. (Appendix C lists some of the most recent ones.) Much of that literature discusses economic growth or entrepreneurship but the list also includes studies of a variety of topics such as income inequality, eminent domain, and labor markets. The vast majority of the results correlate higher levels of economic freedom with positive outcomes, such as economic growth, lower unemployment, reduced poverty, and so on. The results of these studies tend to mirror those found for these same relationships at the country level using the index published in *Economic Freedom of the World*.

Data available to researchers

The full data set, including all of the data published in this report as well as data omitted due to limited space, can be downloaded for free at <<https://www.fraserinstitute.org/economic-freedom/dataset>>. The data file available there contains the most up-to-date and accurate data for the index published in *Economic Freedom of North America*. All editions of the report are available in PDF and can be downloaded for free at <www.fraserinstitute.org/studies/economic-freedom>. However, users are always strongly encouraged to use the data from the most recent data file as updates and corrections, even to earlier years' data, do occur.

If you have difficulty downloading the data, please contact Fred McMahon via e-mail to <freetheworld@fraserinstitute.org>. If you have technical questions about the data itself, please contact Dean Stansel via e-mail to <dean.b.stansel@gmail.com>.

Chapter 1

Economic Freedom of Canada, the United States, and Mexico in 2018

Economic freedom and the index

Economic Freedom of North America is an attempt to gauge the extent of the restrictions on economic freedom imposed by governments in North America. The index published here measures economic freedom at two levels, the subnational and the all-government. At the subnational level, it measures the impact on economic freedom of provincial and municipal governments in Canada and of state and local governments in the United States and Mexico. At the all-government level, it measures the impact of all levels of government—federal, provincial/state, and municipal/local—in Canada, the United States, and Mexico. All 10 provinces, 50 US states, and 32 Mexican states (including Ciudad de México) are included (figures 1.1, 1.2a, 1.2b, and 1.2c).

What is economic freedom and how is it measured in this index?

Writing in *Economic Freedom of the World, 1975–1995*, James Gwartney, Robert Lawson, and Walter Block defined economic freedom in the following way.

Individuals have economic freedom when (a) property they acquire without the use of force, fraud, or theft is protected from physical invasions by others and (b) they are free to use, exchange, or give their property as long as their actions do not violate the identical rights of others. Thus, an index of economic freedom should measure the extent to which rightly acquired property is protected and individuals are engaged in voluntary transactions. (Gwartney, Lawson, and Block, 1996: 12)

The freest economies operate with minimal government interference, relying upon personal choice and markets to answer basic economic questions such as what is to be produced, how it is to be produced, how much is produced, and for whom production is intended. As government imposes restrictions on these choices, there is less economic freedom.

The research flowing from the data generated by the annually published report, *Economic Freedom of the World* (EFW), a project Michael Walker, who was then executive director of the Fraser Institute, initiated 30 years ago, shows that economic freedom is important to the well-being of a nation's citizens. This research has found that economic freedom is positively correlated with per-capita income, economic growth, greater life expectancy, lower child mortality, the development of democratic institutions, civil and political freedoms, and other desirable social and economic outcomes.¹ Just as *Economic Freedom of the World* seeks to measure economic freedom of countries on an international basis, *Economic Freedom of North America* has the goal of measuring differences in economic freedom at both the subnational and all-governments level among the Canadian provinces, US states, and Mexican states.

In 1999, the Fraser Institute published *Provincial Economic Freedom in Canada: 1981–1998* (Arman, Samida, and Walker, 1999), a measure of economic freedom in 10 Canadian provinces. *Economic Freedom of North America* updates and, by including the 50 US states and the 32 Mexican states, expands this initial endeavor. It looks at the 10 Canadian provinces (Northwest Territories, Nunavut, and Yukon are not included) and the 50 US states from 1981 to 2018 and the 32 Mexican states back to 2003. Each province and state is ranked on economic freedom at both the subnational (state/provincial and local/municipal) and the all-government (federal, state, and local) levels. This helps isolate the impact of different levels of government on economic freedom in Canada, the United States, and Mexico. The subnational index provides a comparison of how individual jurisdictions within a country measure up against other jurisdictions in that country. The all-governments index provides a comparison of how individual jurisdictions in different countries compare to each other.

Because of data limitations and revisions, some time periods are either not directly comparable or are not available. When necessary, we have generally used the data closest to the missing time period as an estimate for the missing data (specific exceptions to this approach are discussed individually in Appendix B). If there have been changes in this component during this period, this procedure would introduce some degree of error in the estimate of economic freedom for the particular data point. However, omitting the component in the cases when it is missing and basing the index score on the remaining components may create more bias in the estimate of overall economic freedom.

We examine state- and province-level data in three areas of economic freedom: government spending, taxes, and labor-market freedom. To account for factors that vary primarily across countries but not subnational jurisdictions, our all-government index includes additional variables found in *Economic Freedom of the World*.

-
1. A list of such articles and additional information can be found at <https://www.fraserinstitute.org/economic-freedom/>. See also Easton and Walker, 1997; and De Haan and Sturm, 2000. For the latest summary of literature on economic freedom at an international level, see Doucouliagos and Ulubasoglu, 2006; and Hall and Lawson, 2014.

Prior to the 2012 report, we had not included in the North American index data from several areas used in the index published in *Economic Freedom of the World*—in particular, data for the legal system and property rights, and for regulation of credit and business. There were two reasons for this. Firstly, data in these areas are typically not available at the state/provincial level. Secondly, these are primarily areas of national policy and would vary little from province to province or state to state. Since Canada and the United States had similar scores for these areas in the index of nations and territories covered by the broader world report, that also meant that these factors varied little from province to state and thus it was not essential to include these data in the index of economic freedom in North America.

However, most of these national-level measures do vary substantially for Mexico compared to Canada and the United States. Furthermore, Mexico’s governmental system is much more centralized, with a significantly greater role for the federal government. To enable us to produce a more comparable measure across the three countries, at the all-government level we began including data from the world index for the legal system and property rights and for regulation of credit and business. We later expanded on that approach by adding ten additional components: sound money, freedom to trade internationally, government enterprises and investment, top marginal income and payroll tax rate, and the six components of the area of labor-market regulations.

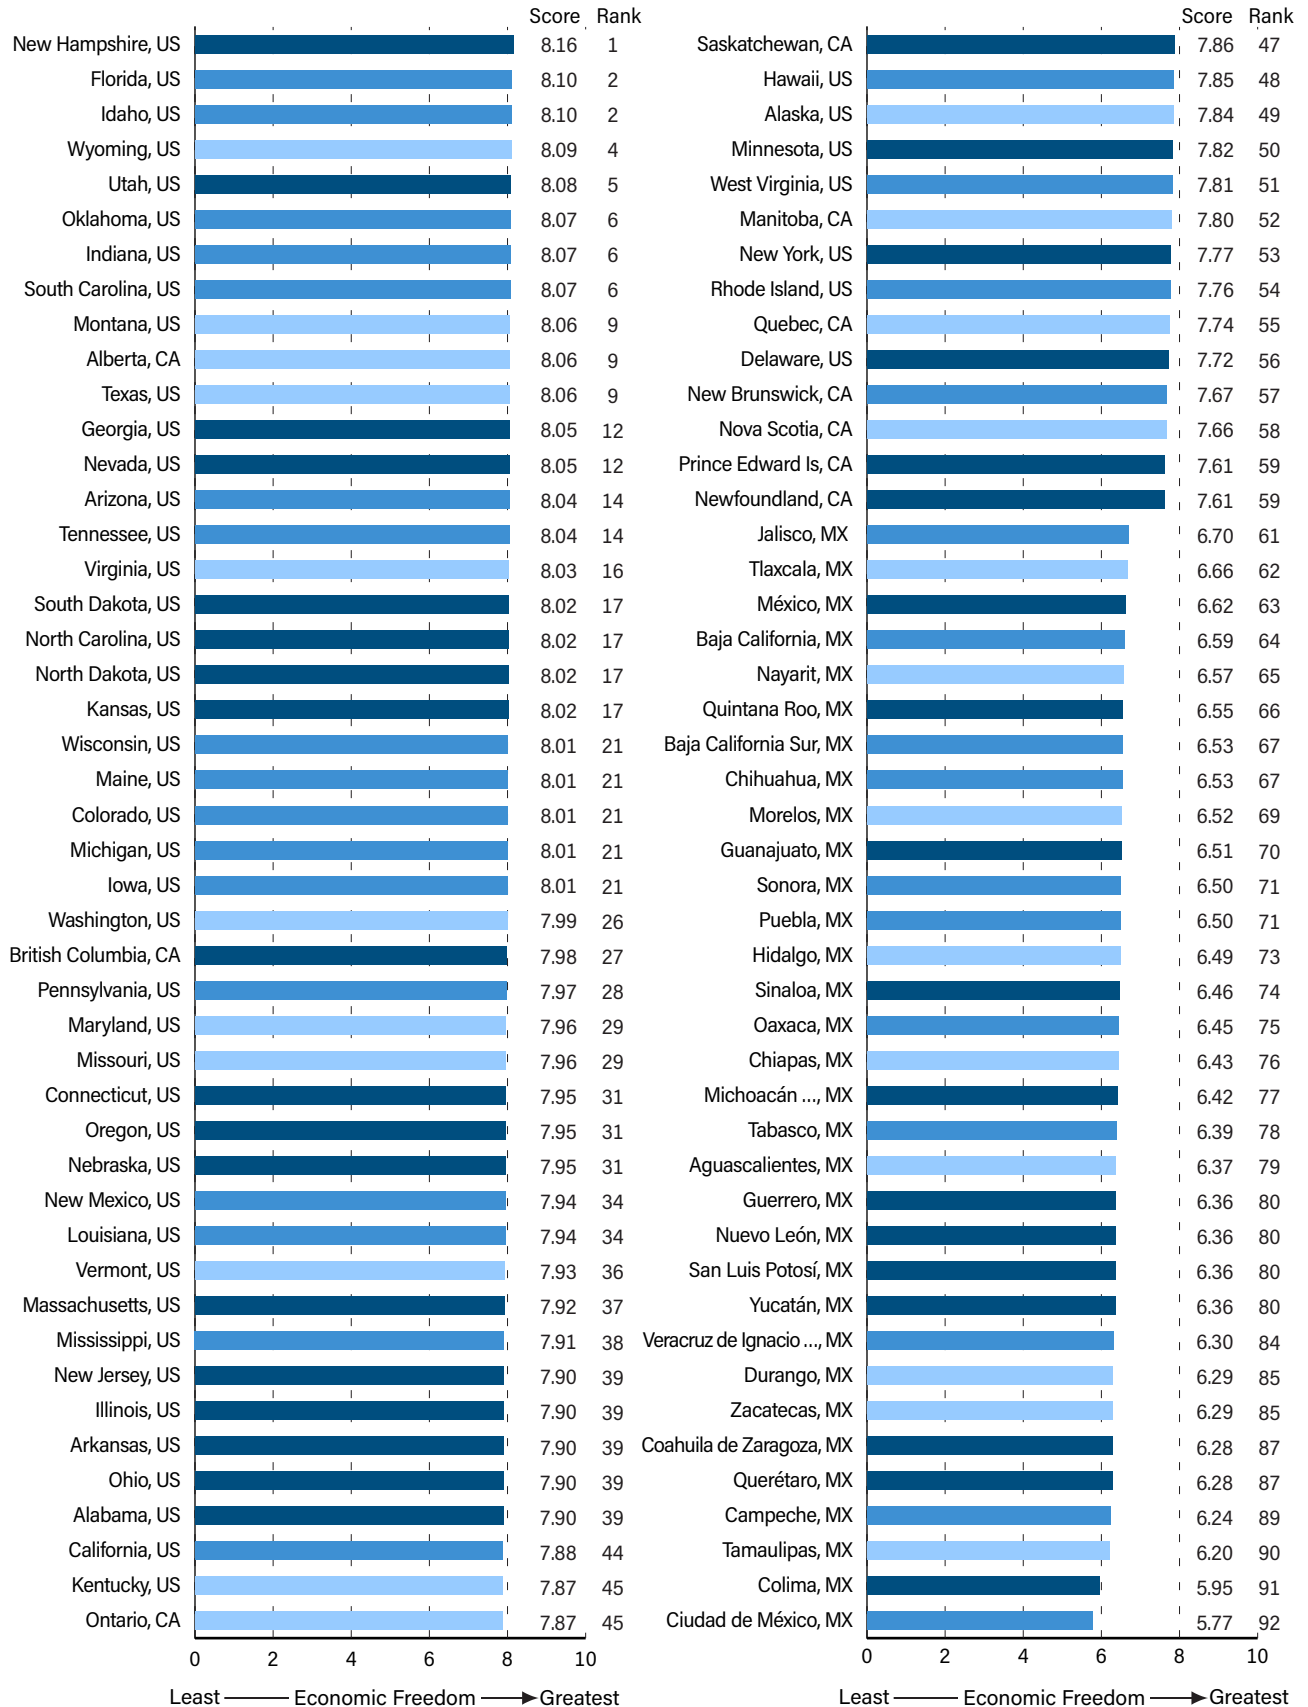

Results on the all-government index

As figure 1.1 indicates, on the all-government index the highest ranked jurisdiction is New Hampshire with a score of 8.16. Florida and Idaho are tied for 2nd with 8.10, followed by Wyoming (8.09) and Utah (8.08).² Alberta is the highest ranked province at 9th place with a score of 8.06. British Columbia, the Canadian province next highest after Alberta, is now at 27th with 7.98. The lowest-ranked Canadian provinces are Newfoundland & Labrador and nearby Prince Edward Island tied at 59th with 7.61, just behind Nova Scotia at 58th with 7.66 and New Brunswick at 57th with 7.67. Those four are also behind the lowest-ranked US state, Delaware, at 56th with 7.72. The next lowest-ranked states in the United States are Rhode Island (54th, 7.76), New York (53rd, 7.77), West Virginia (51st, 7.81), and Minnesota (50th, 7.82).

The highest-rated Mexican state is Jalisco at 61st with 6.70, behind all 50 US states and 10 Canadian provinces, and below 60th place by nearly one full point, though that gap has been shrinking in recent years. Tlaxcala (6.66), Mexico (6.62), and Baja California (6.59) are close behind. The lowest rated is Ciudad de México (92nd with 5.77); slightly better are Colima at 5.95 and Tamaulipas at 6.20. (For a more detailed discussion of Mexican results, see Chapter 2: Economic Freedom of the Mexican States in 2018.)

2. In the figures, ties have been indicated by the use of the same shade.

Figure 1.1: Summary of Ratings for Economic Freedom at the All-Government Level, 2018

As table 1.1 indicates, on average, US states have a higher level of economic freedom on the all-government index than Canadian provinces (7.97 out of 10 compared to 7.79). That margin has been about the same for the past three years. Historically, economic freedom had generally been declining in all three countries, though less so in Canada. From 2004 to 2011, the overall average score declined from 7.70 to 7.21, and then increased steadily to 7.40 in 2018. Since 2013, the average has been rising in both the United States and Mexico, but it has fallen slightly in Canada.

Table 1.1: Average Economic Freedom Scores at the All-Government Level, Selected Years, 2004–2018

	2004	2011	2013	2014	2015	2016	2017	2018
Canada	7.97	7.77	7.90	7.97	7.87	7.86	7.86	7.79
United States	8.31	7.83	7.80	7.90	7.99	8.03	8.05	7.97
Mexico	6.67	6.08	6.14	6.25	6.31	6.23	6.35	6.40
Overall average	7.70	7.21	7.24	7.33	7.39	7.39	7.44	7.40
United States minus Canada	0.35	0.05	-0.09	-0.07	0.11	0.17	0.19	0.18
Canada minus Mexico	1.29	1.69	1.76	1.72	1.56	1.63	1.51	1.39

Table 3.1 (pp. 36–37) shows the individual scores for all six areas included in the all-government index. The calculations for the index and the data sources for the scores are found in appendices A and B. Because of a lack of available data for the Mexican states, the all-government index extends back only to 2003. The longer time series back to 1985 is available in the full dataset published on the Fraser Institute’s website <www.fraserinstitute.org/studies/economic-freedom>. We cannot go all the way back to 1981 because the EFW data is currently only available at five-year intervals prior to 2000. Since these data are at the national level, they do not affect calculations of the subnational indices. The subnational indices for Canada and the United States continue to extend back to 1981.

Results on the subnational indices

For comparisons of jurisdictions within the same country, the subnational indices are most appropriate. Figures 1.2a, 1.2b, and 1.2c show the subnational indices for Canada, the United States, and Mexico.

Canada

Alberta, with a score of 6.61, was in 2018 the most economically free province in Canada, although its lead has shrunk substantially, down from 2.28 points in 2014 to 0.63 in 2018 (figure 1.2a). The next highest province was British Columbia at 5.98 followed by Ontario at 5.16. Quebec was at the bottom with 2.84, well below New Brunswick at 4.08 and Nova Scotia at 4.20.

Figure 1.2a: Summary of the Ratings of Canadian Provinces for Economic Freedom at the Subnational Level, 2018

United States

Figure 1.2b shows the subnational scores for the US states. After a one-year absence in last year's report, New Hampshire is again in the top spot with 7.84, followed by Florida (7.73), Virginia (7.62), and Texas (7.61), and Tennessee (7.55).³ The least-free state was again New York with 4.25, then West Virginia (4.50), Alaska (4.67), California (4.71), and Vermont (5.08).

Mexico

The subnational scores for the Mexican states can be found in figure 1.2c. (Chapter 2 contains a more detailed discussion of the Mexican index.) The most economically free state by this measure was Jalisco at 6.57, followed by Michoacán de Ocampo at 6.39, and Baja California at 6.04.⁴ This year, Zacatecas was the least-free Mexican state at 2.27; slightly higher were Campeche (2.78) and Tabasco (3.44).

In addition to the tables in Chapter 3, all the 2018 scores and rankings for each of the components of the index as well as historical data on the overall and area scores may be found on our interactive website at www.freetheworld.com, where the full dataset is also available for download.

- Note that since the indices were calculated separately for each country, the numeric scores on the subnational indices are not directly comparable across countries.
- Mexico has a much more centralized government structure than Canada and the United States. As a result, since the subnational index leaves out the impact of the federal government, it is a less useful measure of the relative level of economic freedom experienced across the Mexican states.

Figure 1.2b: Summary of the Ratings of US States for Economic Freedom at the Subnational Level, 2018

Figure 1.2c: Summary of Ratings of the Mexican States for Economic Freedom at the Subnational Level, 2018

A note on Alberta

After seven straight years in first place in the rankings, Alberta fell out of the top spot in the 2018 report (reflecting 2016 data), and is now tied for 9th place at 8.06 in this year's report. Since 2014, Alberta's scores declined significantly on both the subnational and all-government indexes in Area 1 (Government spending) and Area 2 (Taxes). It also declined significantly at the subnational level in labour regulations (see table 1.2). In 2015, Albertans elected new political leaders who made changes in taxation, spending, and regulation that had a negative effect on economic freedom. In 2019, Albertans elected politicians who reversed the course of policy and it will be interesting to see what impact this will have on the province's level of economic freedom in future years as data for 2019 and 2020 become available.

Table 1.2: Declining Economic Freedom in Alberta, 2014–2018

		2014	2016	2018	Change
Overall	All-government	8.35	8.13	8.06	-0.29
	Subnational	8.00	7.09	6.61	-1.39
Area 1 (Government spending)	All-government	9.33	8.78	8.68	-0.66
	Subnational	8.48	6.95	6.40	-2.08
Area 2 (Taxes)	All-government	6.58	6.05	5.98	-0.61
	Subnational	7.40	7.21	7.16	-0.24
Area 3 (Labour regulation)	All-government	8.43	8.28	8.30	-0.12
	Subnational	8.13	7.11	6.26	-1.87

Description of components

The theory of economic freedom is no different at the subnational level than it is at the global level, although different variables consistent with the theory of economic freedom must be found that suit subnational measures. The 10 components of the subnational index fall into three areas: Government Spending, Taxes, and Labor Market Freedom. Most of the components we use are calculated as a ratio of income in each jurisdiction and thus do not require the use of exchange rates or purchasing power parities (PPP). The exception is component 2B, Top Marginal Income Tax Rate and the Income Threshold at Which It Applies, where purchasing power parity is used to calculate equivalent top thresholds in Canada and Mexico in US dollars.

Using a simple mathematical formula to reduce subjective judgments, a scale from zero to 10 for each component was constructed to represent the underlying distribution of each of the 10 components in the index. The highest possible score on each component is 10, which indicates a high degree of economic freedom and the lowest possible score is 0, which indicates a low degree of economic freedom.⁵ Thus, this index is a relative ranking. The rating formula is consistent across time to allow an examination of the evolution of economic freedom. To construct the overall index without imposing subjective judgments about the relative importance of the components, each area was equally weighted and each component within each area was equally weighted (see Appendix A: Methodology, p. 57, for more details).

5. Because of the way scores for economic freedom are calculated, a minimum-maximum procedure discussed in Appendix A: Methodology (p. 57), a score of 10 is not indicative of perfect economic freedom, but rather the most freedom among the existing jurisdictions.

In order to produce comparable tax and spending data for jurisdictions of widely different sizes and income levels, all such variables are standardized by dividing by income (as is the minimum-wage variable). In Canada and Mexico, we use “household income”; in the United States, the comparable concept is called “personal income”. We use income instead of GDP because there are some jurisdictions where there are large levels of economic activity (included in GDP) that do not directly benefit residents and GDP thus overstates the resources that residents have available to pay the burden of government. For example, because of peculiarities in its tax law, the US state of Delaware has an abnormally high number of corporate bank headquarters. Much of the revenue generated by those operations goes to shareholders outside Delaware. Those dollars are included in GDP, making taxes and spending seem less burdensome as a percentage of the economy than they actually are. Those dollars are not included in personal income, so using income provides a more accurate measure of the level of economic freedom.

Area 1 Government Spending

1A General Consumption Expenditures by Government as a Percentage of Income

As the size of government expands, less room is available for private choice. While government can fulfill useful roles in society, there is a tendency for government to undertake superfluous activities as it expands: “there are two broad functions of government that are consistent with economic freedom: (1) protection of individuals against invasions by intruders, both domestic and foreign, and (2) provision of a few selected goods—what economists call public goods” (Gwartney, Lawson, and Block, 1996: 22). These two broad functions of government are often called the “protective” and “productive” functions of government. Once government moves beyond these two functions into the provision of private goods, goods that can be produced by private firms and individuals, it restricts consumer choice and, thus, economic freedom (Gwartney, Lawson, and Block, 1996). In other words, government spending, independent of taxation, by itself reduces economic freedom once this spending exceeds what is necessary to provide a minimal level of protective and productive functions. Thus, as the size of government consumption expenditure grows, a jurisdiction receives a lower score in this component.

1B Transfers and Subsidies as a Percentage of Income

When the government taxes one person in order to give money to another, it separates individuals from the full benefits of their labor and reduces the real returns of such activity (Gwartney, Lawson, and Block, 1996). These transfers represent the removal of property without providing a compensating benefit and are, thus, an infringement on economic freedom. Put another way, when governments take from one group in order to give to another, they are violating the same property rights they are supposed to protect. The greater the level of transfers and subsidies, the lower the score a jurisdiction receives.

1C Insurance and Retirement Payments as a Percentage of Income

When private, voluntary arrangements for retirement, disability insurance, and so on are replaced by mandatory government programs, economic freedom is diminished. As the amount of such spending increases, the score on this component declines.

1D Government Investment

(all-government index only)

When government engages in more of what would otherwise be private investment, economic freedom is reduced. This variable, used only in the all-government index, is the country score for variable 1C in *Economic Freedom of the World: 2020 Annual Report*. A detailed description and data sources can be found in that report, available at <<https://www.fraserinstitute.org/studies/economic-freedom-of-the-world-2020-annual-report>>.

Area 2 Taxes

As the tax burden grows, the restrictions on private choice increase and thus economic freedom declines. We examine the major forms of taxation separately.

2A Income and Payroll Tax Revenue as a Percentage of Income

This variable includes all personal and corporate income taxes as well as payroll taxes used to fund social insurance schemes (i.e., employment insurance, Workers Compensation, and various pension plans).

2Bi *Top Marginal Income Tax Rate⁶ and the Income Threshold at Which It Applies*

Because marginal income tax rates represent the direct penalty on economic activity, in addition to the revenue variable, we include a variable that incorporates the top tax rate as well as the income level at which that rate applies. Top personal income-tax rates are rated by the income thresholds at which they apply. Higher thresholds result in a better score. More details can be found in Appendices A and B.

2Bii *Top marginal income and payroll tax rate (all-government index only)*

This variable, used only in the all-government index, is the country score for variable 1Dii in *Economic Freedom of the World: 2020 Annual Report*. A detailed description and data sources can be found in that report, available at <<https://www.fraserinstitute.org/studies/economic-freedom-of-the-world-2020-annual-report>>.

2C Property Tax and Other Taxes as a Percentage of Income

This variable includes all forms of taxation other than income, payroll, and sales taxes (which are already captured in variables 2A and 2D), with one exception. Revenue from taxes on natural resources are excluded for three reasons: 1. most areas do not have them;

6. See Appendix A: Methodology (p. 57) for further discussion of how the rating for the top marginal tax rate and its threshold was derived.

2. their burden is largely exported to taxpayers in other areas; 3. they can fluctuate widely along with the prices of natural resources (for example, oil), thereby creating outliers that distort the relative rankings.

2D Sales Tax Revenue as a Percentage of Income

This variable includes all sales and gross receipts taxes (including excise taxes). Such taxes are a major source of revenue for subnational governments.

Note about intergovernmental transfers and double counting

In examining the two areas above, it may seem that Areas 1 and 2 create a double counting, in that they capture the two sides of the government ledger sheet, revenues and expenditures, which presumably should balance over time. However, in examining subnational jurisdictions, this situation does not hold. A number of intergovernmental transfers break the link between taxation and spending at the subnational level.⁷ The break between revenues and spending is even more pronounced at the all-government level, which includes the federal government. Obviously, what the federal government spends in a state or a province does not necessarily bear a strong relationship to the amount of money it raises in that jurisdiction. Thus, to take examples from both Canada and the United States, the respective federal governments spend more in the province of Newfoundland & Labrador and the state of West Virginia than they raise through taxation in these jurisdictions while the opposite pattern holds for Alberta and Connecticut. As discussed above, both taxation and spending can suppress economic freedom. Since the link between the two is broken when examining subnational jurisdictions, it is necessary to examine both sides of the government's balance sheet.

Area 3 Regulation

3A Labor Market Freedom

3Ai *Minimum Wage Legislation*

High minimum wages restrict the ability of employees and employers to negotiate contracts to their liking. In particular, minimum wage legislation restricts the ability of low-skilled workers and new entrants to the workforce to negotiate for employment they might otherwise accept and, thus, restricts the economic freedom of these workers and the employers who might have hired them.

This component measures the annual income earned by someone working full time at the minimum wage as a percentage of per-capita income. Since per-capita income is a proxy for the average productivity in a jurisdiction, this ratio takes into

7. Most governments have revenue sources other than taxation and national governments also have international financial obligations so that the relation between taxation and spending will not be exactly one to one, even at the national level. Nevertheless, over time, the relationship will be close for most national governments, except those receiving large amounts of foreign aid.

account differences in the ability to pay wages across jurisdictions. As the minimum wage grows relative to productivity, thus narrowing the range of employment contracts that can be freely negotiated, there are further reductions in economic freedom, resulting in a lower score for the jurisdiction. For example, minimum wage legislation set at 0.1% of average productivity is likely to have little impact on economic freedom; set at 50% of average productivity, the legislation would limit the freedom of workers and firms to negotiate employment to a much greater extent. For instance, a minimum wage requirement of \$2 an hour for New York will have little impact but, for a developing nation, it might remove most potential workers from the effective workforce. The same idea holds, though in a narrower range, for jurisdictions within Canada, the United States, and Mexico.

3Aii Government Employment as a Percentage of Total State/Provincial Employment

Economic freedom decreases for several reasons as government employment increases beyond what is necessary for government's productive and protective functions. Government, in effect, is using expropriated money to take an amount of labor out of the labor market. This restricts the ability of individuals and organizations to contract freely for labor services since employers looking to hire have to bid against their own tax dollars to obtain labor. High levels of government employment may also indicate that government is attempting to supply goods and services that individuals contracting freely with each other could provide on their own; that the government is attempting to provide goods and services that individuals would not care to obtain if able to contract freely; or that government is engaging in regulatory and other activities that restrict the freedom of citizens. Finally, high levels of government employment suggest government is directly undertaking work that could be contracted privately. When government, instead of funding private providers, decides to provide a good or service directly, it reduces economic freedom by limiting choice and by typically creating a governmental quasi-monopoly in provision of services. For instance, the creation of school vouchers may not decrease government expenditures but it will reduce government employment, eroding government's monopoly on the provision of publicly funded education services while creating more choice for parents and students and, thus, enhancing economic freedom.

3Aiii Union Density

Workers should have the right to form and join unions, or not to do so, as they choose. However, laws and regulations governing the labor market often force workers to join unions when they would rather not, permit unionization drives where coercion can be employed (particularly when there are undemocratic provisions such as union certification without a vote by secret ballot), and may make decertification difficult even when a majority of workers would favor it. On the other hand, with rare exceptions, a majority of workers can always unionize a workplace and workers are free to join an existing or newly formed union.

To this point in time, there is no reliable compilation of historical data about labor-market laws and regulations that would permit comparisons across jurisdictions

for the United States, Canada, and Mexico. In this report, therefore, we attempt to provide a proxy for this component. We begin with union density, that is, the percentage of unionized workers in a state or province. However, a number of factors affect union density: laws and regulations, the level of government employment, and manufacturing density. In measuring economic freedom, our goal is to capture the impact of policy factors, laws and regulations, and so on, not other factors. We also wish to exclude government employment—although it is a policy factor that is highly correlated with levels of unionization—since government employment is captured in component 3Aii above.

Thus, we ran statistical tests to determine how significant an effect government employment had on unionization—a highly significant effect—and held this factor constant in calculating the component. We also ran tests to determine if the size of the manufacturing sector was significant. It was not and, therefore, we did not correct for this factor in calculating the component. It may also be that the size of the rural population has an impact on unionization. Unfortunately, consistent data from Canada, the United States, and Mexico are not available. Despite this limitation, the authors believe this proxy component is the best available at this time. Its results are consistent with the published information that is available (see, for example, Godin, Palacios, Clemens, Veldhuis, and Karabegović, 2006).⁸

Most of the components of the three areas described above exist for both the subnational and the all-government levels. Income and payroll tax revenue, for example, is calculated first for local/municipal and provincial/state governments, and then again counting all levels of government that capture such revenue from individuals living in a given province or state.

Components added for the all-government index

To incorporate more accurately the differences in economic freedom in the Mexican states relative to the rest of North America, we include a number of variables from the world index in our all-government index of North American states and provinces. The index expands the regulatory area to include data on these areas. Labour regulation becomes one of three components of Area 3: Regulation, which comprises 3A: Labour market regulation; 3B: Credit market regulation (Area 5A from *Economic Freedom of the World*); and 3C: Business regulations (Area 5C from EFW). (See Appendix A for a description of how Area 3 is now calculated.)

-
8. The National Right to Work Legal Defense Foundation (2011) provides a reasonable measure of right-to-work laws and when they were established for US states (see <www.nrtw.org/b/rtw_faq.htm>). We considered using this to replace or complement the measure of unionization rates used in the past. However, the benefit of using a measure of unionization rates is that it picks up some of the differences in enforcement and informal freedoms not picked up by the legislation. For instance, some states may have right-to-work laws with weak enforcement while other states that do not have such laws may actually protect labor freedom more in practice. Although we decided not to include a measure for right-to-work legislation, the analysis was fruitful in that it strongly validates the proxy as an appropriate measure of workers' freedom.

Why the regulation of credit and business affects economic freedom is easily understood. When government limits who can lend to and borrow from whom and puts other restrictions on credit markets, economic freedom is reduced; when government limits business people's ability to make their own decisions, freedom is reduced.

- 3A Labor Market Regulation
 - 3Aiv *Hiring regulations and minimum wage*
 - 3Av *Hiring and firing regulations*
 - 3Avi *Centralized collective bargaining*
 - 3Avii *Hours regulations*
 - 3Aviii *Mandated cost of worker dismissal*
 - 3Aix *Conscription*
- 3B Credit Market Regulation
 - 3Bi *Ownership of banks*
 - 3Bii *Private sector credit*
 - 3Biii *Interest rate controls/negative real interest rates*
- 3C Business Regulations
 - 3Ci *Administrative requirements*
 - 3Cii *Bureaucracy costs*
 - 3Ciii *Starting a business*
 - 3Civ *Impartial public administration*
 - 3Cv *Licensing restrictions*
 - 3Cvi *Cost of tax compliance*

We also include three other areas: Area 4: Legal System and Property Rights (Area 2 from *Economic Freedom of the World*), Area 5: Sound Money (Area 3 from EFW), and Area 6: Freedom to Trade Internationally (Area 4 from EFW).

Area 4 Legal System and Property Rights

Protection of property rights and a sound legal system are vital for economic freedom, otherwise the government and other powerful economic actors for their own benefit can limit the economic freedom of the less powerful. The variables for Legal System and Property Rights from the world index are the following.

- 4A Judicial Independence
- 4B Impartial Courts
- 4C Protection of Property Rights
- 4D Military Interference in Rule of Law and Politics
- 4E Integrity of the Legal System
- 4F Legal Enforcement of Contracts
- 4G Regulatory Restrictions on the Sale of Real Property
- 4H Reliability of Police

Area 5 Sound Money

Provision of sound money is important for economic freedom because without it the resulting high rate of inflation serves as a hidden tax on consumers. The variables for Sound Money from the world index are the following.

- 5A Money Growth
- 5B Standard Deviation of Inflation
- 5C Inflation: Most Recent Year
- 5D Freedom to Own Foreign Currency Bank Accounts

Area 6 Freedom to Trade Internationally

Freedom to trade internationally is crucial to economic freedom because it increases the ability of individuals to engage in voluntary exchange, which creates wealth for both buyer and seller.

The variables for Area 6 from the world index are the following.

- 6A Tariffs
 - 6Ai *Revenue from trade taxes (% of trade sector)*
 - 6Aii *Mean tariff rate*
 - 6Aiii *Standard deviation of tariff rates*

- 6B Regulatory trade barriers
 - 6Bi *Non-tariff trade barriers*
 - 6Bii *Compliance costs of importing and exporting*

- 6C Black-market exchange rates

- 6D Controls of the movement of capital and people
 - 6Di *Financial openness*
 - 6Dii *Capital controls*
 - 6Diii *Freedom of foreigners to visit*

More information on the variables and the calculations can be found in Appendices A and B. For detailed descriptions of the country-level variables, readers can refer to Appendix: Explanatory Notes and Data Sources in *Economic Freedom of the World: 2020 Annual Report* (Gwartney, Lawson, Hall, and Murphy, 2020). The inclusion of these data from the world index raises the scores for both the Canadian provinces and US states since both Canada and the United States do well in these areas when compared to other nations, as is done in the world index. The effect on the Mexican states tends to be the opposite.

Overview of the results

Following are some graphs that demonstrate dramatically the important links between prosperity and economic freedom. Figure 1.3 breaks the states and provinces into quartiles (or fourths) by economic freedom at the all-government level. For example, the category on the far left of the chart, “Least Free”, represents the jurisdictions that score in the lowest fourth of the economic freedom ratings, the 23 lowest of the 92 Canadian, Mexican, and American jurisdictions. The jurisdictions in this least-free quartile have an average per-capita income of just US\$2,277. This compares to an average per-capita income of US\$50,645 for the 23 top-ranked jurisdictions. Figure 1.4 is similar to figure 1.3 but it shows economic freedom at the subnational level and measures both economic freedom and per-capita income as deviations from the average, since the three subnational indices are not directly comparable.⁹ Jurisdictions in the most-free quartile had per-capita incomes 4.6% above the national average, while those in the least-free quartile were 8.1% below it. In each index, average per-capita income in the most-free jurisdictions is substantially higher than in those that are the least free.

Finally, in this illustrative section, we look at the relationship between the growth of economic freedom and the growth of a jurisdiction’s economy. In figure 1.5 and figure 1.6, growth in economic freedom is plotted along the horizontal axis while growth in income per capita is plotted along the vertical axis. Again, the expected relationships are found, with economic growth positively correlated with growth in economic freedom whether the latter is measured at the all-government level or the subnational level.

Comparing the all-government level and the subnational level

The distribution of government responsibilities between the federal government and subnational governments varies widely across the three nations in North America. For example, in 2016, provinces and local governments accounted for about 64% of total government revenue in Canada. In the United States, state and local governments were responsible for 35%, and in Mexico, for only 5%. Thus, government spending and taxation patterns cannot be directly compared. Rather than scoring US states, Canadian provinces, and Mexican states together, we produce separate subnational indices for each country. This provides a more useful comparison of how individual jurisdictions within each country measure up against other jurisdictions in that same country. For those who wish to compare jurisdictions in different countries, the all-government index is the more appropriate measure.

9. Since the subnational index scores are calculated separately for each country, we cannot average the scores of jurisdictions in different countries. Instead, we have calculated for each jurisdiction the deviation from the national average for both their economic freedom score and their per-capita income, and based the quartiles on the former.

Figure 1.4: Economic Freedom at the Subnational Level and Income per Capita—Deviation (%) from National Average, 2018

Figure 1.5: Average Growth in Income per Capita and in Economic Freedom at the All-Government Level, 2009–2018

Figure 1.6: Average Growth in Income per Capita and in Economic Freedom at the Subnational Level, 2009–2018

Economic freedom and economic well-being

Many independent studies have linked levels of economic freedom, as measured by the index published annually in *Economic Freedom of the World*, with higher levels of economic growth and income. For example, Easton and Walker (1997) found that changes in economic freedom have a significant impact on the steady-state level of income even after the level of technology, the level of education of the workforce, and the level of investment are taken into account. The results of this study imply that economic freedom is a separate determinant of the level of income. The Fraser Institute's series, *Economic Freedom of the World*, also shows a positive relationship between economic freedom and both the level of per-capita GDP and its growth rate.

Similarly, De Haan and Sturm (2000) show that positive and negative changes in economic freedom lead to positive and negative changes in rates of economic growth. Using the index of economic freedom from Gwartney, Lawson, and Block, 1996 and per-capita GDP data for 80 countries, their results indicate that, after accounting for education level, investment, and population growth, changes in economic freedom have a significant impact on economic growth.¹⁰

The calculation of the index of the economic freedom of Canadian provinces and Mexican and US states allows for the investigation, via econometric testing, of the relationship between economic freedom and prosperity within North America. Since the publication of the first edition of *Economic Freedom of North America* in 2002, more than 310 academic and policy articles exploring the relationship between our measure of economic freedom and other indicators such as economic growth and entrepreneurial activity have appeared.¹¹ Findings have been similar to those using the national index. In one recent example, a 10% increase in economic freedom was found to be associated with a 5% increase in real per-capita gross state product (Hall, Lacombe, and Shaughnessy, 2019).

The importance of economic freedom

In this publication, we have focused on the measurement of economic freedom. In Chapter 3 of the 2013 report, we discussed some of the empirical testing of the impact of economic freedom that has been done by other independent researchers.¹² However, the reader may wonder why economic freedom is so clearly related to growth and prosperity—as much of that literature has found. Throughout the twentieth

 12. More recent surveys can be found in Stansel and Tuszynski, 2018 and Hall, Stansel, and Tarabar, 2015.

century there was vigorous debate about whether planned or free economies produce the best outcomes. In many ways, this debate goes back to the beginnings of modern economics when Adam Smith famously argued that each of us, freely pursuing our own ends, create the wealth of nations and of the individual citizens.

The results of the experiments of the twentieth century should now be clear: free economies produce the greatest prosperity in human history for their citizens. Even poverty in these economically free nations would have been considered luxury in unfree economies. This lesson was reinforced by the collapse of centrally planned states in the Soviet sphere. Among developing nations, those that adopted the centrally planned model have only produced lives of misery for their citizens. Those that adopted the economics of competitive markets have begun to share with their citizens the prosperity of advanced market economies.

While these comparisons are extreme examples from opposite ends of the spectrum of economic freedom, a considerable body of research shows that the relationship between prosperity and economic freedom holds in narrower ranges. Sophisticated econometric testing backs up this relationship but examples are also interesting. In the United States, the relatively free Virginia does much better than the relatively unfree West Virginia. While this is hardly the place to review several centuries of economic debate, the mechanics of economic freedom are easy to understand. Any transaction freely entered into must benefit both parties; any transaction that does not benefit both parties would be rejected by the party that would come up short. This has consequences throughout the economy. Consumers who are free to choose will only be attracted by superior quality and price. Producers must constantly improve the price and quality of their products to meet customers' demands or customers will not freely enter into transactions with them. Many billions of mutually beneficial transactions occur every day, powering the dynamic that spurs increased productivity and wealth throughout the economy.

Restrictions on freedom prevent people from making mutually beneficial transactions. Such free transactions are replaced by government action. This is marked by coercion in collecting taxes and lack of choice in accepting services: instead of gains for both parties arising from each transaction, citizens must pay whatever bill is demanded in taxes and accept whatever service is offered in return. Moreover, while the incentives of producers in a competitive market revolve around providing superior goods and services in order to attract consumers, the public sector faces no such incentives. Instead, as public-choice theory reveals, incentives in the public sector often focus on rewarding interest groups, seeking political advantage, or even penalizing unpopular groups. This is far different from mutually beneficial exchange although, as noted earlier, government does have essential protective and productive functions.

In some ways, it is surprising the debate still rages because the evidence and theory favoring economic freedom match intuition: it makes sense that the drive and ingenuity of individuals will produce better outcomes through the mechanism of

mutually beneficial exchange than the designs of a small coterie of government planners, who can hardly have knowledge of everyone's values and who, being human, are likely to consider first their own well-being and that of the constituencies they must please when making decisions for all of us.

Chapter 2

Economic Freedom of the Mexican States in 2018

Introduction

Measuring economic freedom in Mexico has always been difficult. Previous efforts to include Mexico in the index published in *Economic Freedom of North America* were successful in measuring the relative positions for economic freedom that Mexican states hold against each other, but the results were not fully comparable with those of the Canadian provinces or the US states. The advancement of those efforts and the adjustments introduced to the methodology in the 2012 and 2013 reports laid the groundwork that made it possible to build an integrated index for North America for the first time in the 2014 report. Since 2014, we have continued to make incremental improvements to the report each year.

Before proceeding to the analysis of the data we need to address the problems faced earlier while constructing the index of economic freedom for the Mexican States. There were two main reasons that the data collected for the Mexican economy was not comparable with that of the US states and Canadian provinces. First, most of the data for Mexico is incomplete and does not date as far back as the US and Canadian data do. The length of the Mexican time series should not cause too much trouble when the three countries are compared as most data are available for Mexico in a standardized way from 2003. Data from previous years is unreliable since the methods used for measuring aggregates were different than those currently used. These changes made it very difficult to work with long series because the data tend to vary widely from one methodology to another. The only feasible solution was to include only the standardized and trustworthy data for Mexico from 2003 to 2017. As for the incompleteness of the data, while most of the figures required for the components are available publicly to researchers from the National Institute of Statistics and Geography (INEGI), there is a portion that is scattered around in websites and yearbooks published by different departments of state, and states and municipal governments. Access to these data, while it is not restricted, requires that researchers have previous knowledge of its existence and of how and where to locate it. There

are also some data, such as the social security payments required for component 1C, that is not available to the public and in order to get access to it the researcher has to go through a series of bureaucratic procedures that may take months to be cleared and that require the researcher to visit government offices personally, making access impossible for most institutions outside the country. We have been able to acquire all the data that had been missing from the previous reports and, while some of the variables used are not identical to those used for the Canadian provinces and US states because of the differences in the methodologies, the differences among them is not significant and allow for comparison.

The second reason that the comparison among the three countries was not possible was that “the index of *Economic Freedom of North America* did not contain components on the rule of law or property rights” (Karabegović and McMahon, 2008: 69). This was because there had been little difference between Canada and the United States on scores for Legal System and Property Rights. However, after 2010 Canadian and US scores had begun to drift apart, making it necessary to modify the methodology in order to measure these changes properly. This issue was solved in 2012 by including variables for the rule of law from *Economic Freedom of the World* in the North American index.

The absence of variables measuring the legal system had been a huge concern in previous efforts to integrate Mexico into the North American index since Mexico does not enjoy the same degree of protection of property rights and rule of law. In previous measurements, additional components taken from publications and polls by other institutions were used to reflect the issues with the legal system in Mexico. Because these components were not available for the US states and Canadian provinces, the Mexican data, while more accurate in itself, could not be compared to the data from the other two countries. The inclusion of the rule-of-law components from *Economic Freedom of the World* opened the door to including Mexico fully in the North American report by reflecting the large gap between the rule of law in Mexico and that in its two northern neighbors.

Another factor that made it difficult to make a comparison among the three countries was the differences that exist in labor regulations. Mexican law, for example, makes the hiring and firing of workers by the private enterprise a very difficult task. The number of regulations applied to the labor market and its lack of flexibility are a huge impediment for free enterprise. Canada and the United States have much more flexible labor markets but these differences could not be reflected using the earlier methodology. Past reports included components that measured Credit Market Regulations and Business Regulations, both from Area 5 of *Economic Freedom of the World*; but, since the results for the labor market were similar for the United States and Canada, the components measuring labor market regulation were left out. Starting with the *Economic Freedom of North America 2015*, however, given the difference in policies on labor regulation between these two countries and Mexico, it was resolved to add as well the components of area 5B from *Economic Freedom of the World* to help reflect the effect of the differences in labor policies on the index and help make a better comparison.

The data

As previously stated, this year's report includes the complete data for the 10 components of *Economic Freedom of North America* from 2003 to 2018; the data covers the 32 Mexican states.¹ Several adjustments have to be made in how the data were measured for Mexico. In Mexico, the *Comisión Nacional de Salarios Mínimos* (National Commission for the Minimum Wage) is the institution in charge of dividing the country into geographic zones and defining, annually, the minimum wage that is going to be applied on each zone. The 2,440 municipalities from the 31 states and the 16 boroughs of the Federal District were previously classified in three geographic zones, A, B, and C. After November 26, 2012, zone C was eliminated leaving only two zones for the classification. Since the majority of the states contained municipalities classified in different geographic zones, there is no homogenous minimum wage for each state. In order to get a better estimate of the impact of the minimum wage on each state, this figure was estimated with a weighted average of the wages in the various zones (based on municipality populations). Starting in 2016, the zones were eliminated and the minimum wage was unified and set nationwide. This eliminated the need for estimating with weighted averages.

Personal income, from years 2003 to 2014, was estimated from the *Encuesta nacional de ingresos y gastos de los hogares* (National household income and spending poll, ENIGH), using the same formula that the US Bureau of Economic Analysis uses for their calculations. It is important to mention that because of the nature of this poll, household income tends to be underestimated since the respondents usually choose not to disclose their real income levels out of fear that they could get in trouble for any income they are not declaring to the *Servicio de Administración Tributaria* (Taxation administration service). For 2016, changes were made to the way the ENIGH measured income for the households. These new series were not compatible with the previous one. The National Council for the Evaluation of Social Development Policy (CONEVAL) put out an alternative measurement using a statistical adjustment for the new series in order to make them more comparable. For years 2015 and 2016, we estimated the Personal Income using this adjusted new series. For 2018, the ENIGH measurement was reworked and it is now again compatible with both the old series and CONEVAL's own adjusted methodology.

Results

The economic freedom ranking for the Mexican states in the all-government index for 2018 (figure 2.1) has *Jalisco* in the first place, and *Tlaxcala, Mexico, Baja California*, and *Nayarit* following in the next four places among Mexican states; they place 61st to

1. *Ciudad de México* was not a state but a federal district (*Distrito Federal*) until 2016, but it is home to the second-largest population among Mexican states and has the highest state GSP. *Ciudad de México*, even prior to its becoming a state, was included in the analysis, as not including it would have left out a very important portion of the Mexican economy.

Figure 2.1: Summary of Economic Freedom Ratings for Mexican States at the All-Government Level, 2018

65th among all the states and provinces of North America. The lowest ranking was that of *Ciudad de México*; *Colima* and *Tamaulipas* placed in the next two lowest rankings.

Coahuila de Zaragoza was ranked in the top five among Mexican states on reports from 2013 to 2017 as a result of the forced austerity policies that had been applied by its government since the beginning of 2012 after the state's bankruptcy. With these policies, government expenditures were significantly reduced. This factor and the state's already relatively low level of taxation are what caused *Coahuila* to be ranked as high as it was in recent reports. This changed for 2016 when the austerity policies were relaxed and the government had the ability to increase spending and taxation. Since then, *Coahuila* has dropped 24 places from its 2017 ranking, and it now holds 87th position out of the 92 states and provinces of North America.

Colima and *Campeche*, two of the lowest ranked states, score poorly on both the Government Spending and Taxes areas. Their high tax revenue and high government spending makes them two of the four least economically free states of North America. The reasons for the low ranking of the *Ciudad de México* are mainly its government consumption and tax revenue, which are the largest in the country; these could be explained in part because of *Ciudad de México*'s size and its importance in the economy and by the fact that all the federal government departments have their headquarters there. Nonetheless, the high level of government spending crowds out the space for free exchange and thus reduces economic freedom.

It is important to note that, for all the components of Area 2, there were difficulties when dealing with revenue: certain states such as *Oaxaca* and *Chiapas* reported very low tax revenue because of the large size of their informal sectors. However, most of this income is reported on the income and spending surveys conducted by INEGI, which is reflected in the personal income numbers, and thereby drives up the scores of these states but does not necessarily reflect the status of economic freedom there. This same problem would apply to the states like *Guerrero*, *Sinaloa*, *Michoacán*, and *Nayarit*, where drug cartels are very active. This problem was, however, partially solved by our recent changes in the variables regarding sales and excise taxes and income taxes at the all-government level.² (See appendices A and B for a full description of the variables.) These issues also show the need of improvement in the measurement of the Rule of Law for the Mexican states.

Economic freedom and well-being in the Mexican States

In past reports, there has been exhaustive analysis of the correlation between well-being and economic freedom. The relationship between these variables has always been positive and it has been concluded that economic freedom has a direct relationship to the well-being of a state's population. That conclusion has been supported by a large and growing literature produced by independent scholars, now over 280 published articles. (See Appendix C for a list of some of the most recent articles.) The positive relationship between economic freedom and personal income holds true for the Mexican states' data.

As can be seen in figure 2.2, there is indeed a positive relationship between the scores for economic freedom and the average personal income per capita: the states in the highest quartile of economic freedom have higher average personal income than

-
2. For the Mexican states, we take the national total of federal sales and excise tax revenue and divide it by the national total for personal income. That resulting ratio is used as the number for all 32 states on variable 2D in the all-government index. A similar approach is taken for the federal corporate income tax in all three countries. We take the national total of federal corporate income-tax revenue and divide it by the national total for personal income. That resulting ratio is used for all 32 states and added to the actual state numbers for individual income and payroll tax revenue as a percentage of personal income in each state to get the total figure for variable 2A in each state.

Figure 2.2: Economic Freedom at the Subnational Level and Income per Capita (US\$ 2018) in Mexico, 2018

Source: Instituto Nacional de Estadística y Geografía, 2018.

those in the lowest quartile. The states belonging to the freest quartile have an average income of US\$2,873 per capita, about 42% higher than the average income of the least free quartile, US\$2,029. This statistical relationship, while by itself not conclusive of the connection between well-being and economic freedom, seems consistent with past years' econometric analysis on this relationship.

Results at the subnational level

Mexico is a highly centralized country where the federal government is in charge of most of the spending and the taxation. For example, as figure 2.3 shows, federal revenue for 2016 exceeded 90% of the total revenue at all levels, compared to 65% in the United States and about 35% in Canada. This degree of centralization has an impact on the components we can use for measuring an accurate ranking at the subnational level; there are a number of components that can only be measured at the federal level. Since there are no state or local income taxes in Mexico, in the subnational index component 2A (income and payroll taxes) contains only payroll taxes and there is no component 2B (the top marginal income-tax rate).

Component 1C poses a similar conflict. Social security in Mexico is almost totally centralized. Only one of the 32 states has its own Social Security institution, which serves only a minority of their population because the rest are already covered by either of the federal social security institutions (*Instituto Mexicano del Seguro Social* for the private sector and *Instituto de Seguridad Social y Servicio de los Trabajadores*

Figure 2.3: Centralization of the First Three Areas of Economic Freedom of North America in Mexico, the United States, and Canada, 2016

Cuenta de la Hacienda Pública Federal, Secretaría de Hacienda y Crédito Público (various years); Instituto Nacional de Estadística y Geografía (INEGI), Estadísticas de Finanzas Municipales y Estatales (various years); Statistics Canada (2018); US Office of Management and Budget (n.d.); table 14.1—Total Government Receipts in Absolute Amounts and as Percentages of GDP: 1948–2017, table 14.2—Total Government Expenditures: 1948–2017.

del Estado for the public sector); the armed forces and the PEMEX workers also have their own social security institution. The inclusion of component 1C would worsen the ranks of the states that have their own social security institutes and raise the average ranks of the state that do not, making them appear to be much better off than those that do. We decided then not to include component 1C on the grounds that, while its inclusion would make a more accurate measurement of the states with local social security, it would give an unfair advantage to the rest since the amount paid to the local social security agencies is not really significant given the centralization of the social security.

At the subnational level, for 2018 *Jalisco*, *Michoacán*, and *Baja California* were the three states with the highest rankings (figure 1.2c). *Baja California* and *Jalisco* were also at the top of the all-government level so their ranking comes as no surprise as these states have high scores for Areas 1 and 3. *Michoacán* has the highest score among Mexican states for Area 2 and above-average scores for Areas 1 and 3, which accounts for its high ranking at the subnational level. In the All-government index, however, it drops to place 17th out of 32.

For Area 1 at the subnational level, *Ciudad de México* ranked third among the Mexican states. *Ciudad de México* has a significant advantage on this particular area over the states because it has only one level of subnational government. The poorest scores for this area belonged to *Chiapas*, *Zacatecas*, *Oaxaca*, *Campeche*, and *Guerrero*.

With the exception of *Zacatecas*, these states are among the least developed in the country, which makes them receivers of large subsidies and transfers; these in turn account for a high level of government spending.

Michoacán de Ocampo, *Oaxaca*, and *Tlaxcala* held the top three ranks for Area 2. The high rankings of these three states are mostly because a large part of their populations work in the informal sector and, thus, are not registered in the *Registro Federal de Contribuyentes* (Federal Registry of Taxpayers) and do not pay any direct taxes. *Queretaro*, *Quintana Roo*, and *Ciudad de Mexico* are the three states with the lowest scores.

Ciudad de México, *Baja California*, and *Chihuahua* ranked at the top for Area 3. *Ciudad de México*, while having the largest ratio of government employment to total employment, also has the lowest income-weighted minimum wage and ranks at the top in component 3Aiii. The degree to which the minimum wage is binding on labor markets depends on the level of income. In higher income areas, the now unified Mexican minimum wage is by definition less binding on the labor market in that area. *Ciudad de Mexico* has the highest income amongst the 32 states. *Tabasco*, *Zacatecas*, and *Guerrero* had the lowest scores for this area.

Conclusion

This is the seventh year that Mexico has been included in the index published in *Economic Freedom of North America*. Since the conception of the index, many changes in the methodology were needed to make it possible to reflect not only the circumstantial but the structural differences between legislation and policies in Canada, the United States, and Mexico. Mexico's highly centralized government, excessive regulation, and lack of an effective legal system that protects property rights is still a drag on economic freedom and it is certainly what causes the country's states to rank so low when compared to the Canadian provinces and US states.

Jalisco, *Tlaxcala*, *Mexico*, *Baja California*, and *Nayarit* were the highest-ranked Mexican states at the all-government level, ranking 61st to 65th among their North American peers. *Coahuila*, which had been ranking in the top 3 since 2014 and owed its ranking to the forced policy of austerity adopted to repair years of reckless spending and irresponsible debt contracting, has now fallen to the 85th position. The lowest rankings were held by *Ciudad de México* (92nd), *Colima* (91st), and *Tamaulipas* (90th).

In the subnational rankings, *Jalisco*, *Michoacán*, and *Baja California* were the top-ranked states. *Zacatecas*, *Campeche*, and *Tabasco* were the lowest ranked.

Chapter 3

Detailed Tables of Economic Freedom in Canada, the United States, and Mexico

The following tables provide more information on economic freedom in the provinces and states as measured by the index of economic freedom in North America at the all-government and the subnational levels. At the all-government level, the index measures the impact of all levels of government—federal, provincial/state, and municipal/local—in Canada, the United States, and Mexico. At the subnational level, it measures the impact of provincial and municipal governments on economic freedom in Canada and state and local governments in the United States and Mexico.

In addition to the tables found in chapter 3, our interactive website at <https://www.fraserinstitute.org/economic-freedom> contains all the latest scores and rankings for each of the components of the index as well as historical data on the overall and area scores. The full dataset is also available for download at that same website.

Economic Freedom in Canada, the United States, and Mexico

Tables 3.1 (a, b, c) and 3.2 (a, b, c) provide a detailed summary of the scores for 2018. Tables 3.3 (a, b, c) to 3.10 (a, b, c) provide historical information both for the overall index and for each of Area 1: Government Spending; Area 2: Taxes; and Area 3: Labor Market Freedom. Economic freedom is measured on a scale from zero to 10, where a higher value indicates a higher level of economic freedom.

Detailed data for the world-adjusted scores, taken from the *Economic Freedom of the World: 2020 Annual Report* (Gwartney, Lawson, Hall, and Murphy, 2020), are not included; they can be found in that publication. Tables 3.3 (a, b, c) to 3.10 (a, b, c) show data for a selection of years. The full set of data from 1981 to 2018 and all other data included in this report are available at www.fraserinstitute.org/studies/economic-freedom.

* Rank out of 50, 2018

Appendix A

Methodology

Calculating the scores

To avoid subjective judgments, objective methods were used to calculate and weight the components. For all components, each observation was transformed into a number from zero to 10 using the following formula: $(V_{\max} - V_i)/(V_{\max} - V_{\min}) \times 10$, where (unless otherwise stated) V_{\max} is the largest value found within a component, V_{\min} is the smallest, and V_i is the observation to be transformed. The 2005 data were used to derive the maximum and minimum values for each variable. In some cases, there were severe outliers that skewed the scores substantially, so we chose a lower maximum or higher minimum, typically the mean plus or minus between one and four standard deviations (see Appendix B and *Economic Freedom of the World*, which uses a similar approach). When an observation equals or exceeds the 2005 maximum, it is given a score of 0; when it equals or falls below the 2005 minimum, it is given a score 10. For each component, the calculation was performed for all data for all years to allow comparisons over time.

To transform the individual components into specific areas and the overall summary index, multiple categories were created. In the subnational index, Areas 1, 2, and 3 were equally weighted, and each of the components within each area was equally weighted. For example, the weight for Area 1 was 33.3%. Area 1 has three components, each of which received equal weight in calculating Area 1, or 11.1% in calculating the overall index. The all-government index adds the following:

- one additional component to Area 1—1D: Government Investment (the country score for variable 1C in *Economic Freedom of the World: 2020 Annual Report* [EFW]);
- one additional component to Area 2B—2Bii: Top marginal income and payroll tax rate (the country score for variable 1Dii in EFW);
- eight additional components to Area 3—
 - 3Aiv–ix: the six components of Labor market regulation (variable 5B in EFW),
 - 3B: Credit Market Regulations (variable 5A in EFW), and
 - 3C: Business Regulations (variable 5C in EFW);

- Area 4: Legal System and Property Rights (Area 2 in the EFW);
- Area 5: Sound Money (Area 3 in the EFW); and
- Area 6: Freedom to Trade Internationally (Area 4 in the EFW).

Thus, it has six areas. Each area was equally weighted and each of the components within each area was equally weighted. More details on the calculations and data sources for the adjusted index can be found in Appendix B.

Fiscal variables

In order to produce comparable tax and spending data for jurisdictions that are of widely different sizes and income levels, all such variables are measured as a percentage of income, as is the minimum wage variable. In Canada and Mexico, we use “household income”. In the United States, the comparable concept is called “personal income”.

Income tax

Calculating the income-tax component was more complicated. The component examining the top marginal income-tax rate and the income threshold at which it applies was transformed into a score from zero to 10 using Matrix 1, Matrix 2a, and Matrix 2b. Canadian nominal thresholds were first converted into constant 2018 Canadian dollars by using the Consumer Price Index and then converted into US dollars using the Purchasing Power Parity between Canada and the United States for each year. US nominal thresholds were converted into real 2018 US dollars using the Consumer Price Index. Mexican nominal thresholds were first converted into constant 2018 Mexican Pesos by using the *Indice Nacional de Precios al Consumidor* (National Consumer Price Index) and then converted into US dollars using the Purchasing Power Parity between Mexico and the United States for each year. This procedure is based on the transformation system found in *Economic Freedom of the World: 1975–1995* (Gwartney, Lawson, and Block, 1996), modified for this study to take into account a different range of top marginal tax rates and income thresholds. Matrix 1 was used in calculating the score for Component 2Bi, Top Marginal Income Tax Rate and the Income Threshold at Which It Applies, at the all-government level; Matrix 2a was used to calculate the score for Component 2B at the subnational level for Canada, and Matrix 2b was used for the United States. Since there are no subnational income taxes in Mexico, this variable was not included in the Mexican subnational index.

In setting the threshold levels for income taxes at the subnational level, we faced an interesting quandary. In the United States, most state thresholds were below US federal thresholds in the 1980s and 1990s. In Canada, provincial thresholds were frequently higher than federal thresholds. Whenever the provincial or state threshold was higher than the federal threshold, the federal threshold was used at the sub-national level since, when a provincial threshold is above the national level, the cause is typically the imposition of a relatively small surcharge on those earning high incomes. Because of the structure of these matrixes, this can produce perverse scoring results. For example, in Matrix 2b a jurisdiction gets a score of 2.5 if it has a top marginal income-tax rate of, say, 12.5% for incomes over \$64,288. Let us say the

Matrix 1: Income Tax Matrix for Component 2B at the All-Government Level

Top Marginal Tax Rate	Income Threshold Level (US\$2018)		
	Less than \$64,288	\$64,288 to \$128,575	More than \$128,575
27% or less	10.0	10.0	10.0

39% to 42%	5.0	5.5	6.0
42% to 45%	4.0	4.5	5.0
45% to 48%	3.0	3.5	4.0
48% to 51%	2.0	2.5	3.0
51% to 54%	1.0	1.5	2.0
54% to 57%	0.0	0.5	1.0
57% to 60%	0.0	0.0	0.5
60% or more	0.0	0.0	0.0

Matrix 2a: Income Tax Matrix for Component 2B at the Subnational Level in Canada

Top Marginal Tax Rate	Income Threshold Level (US\$2018)		
	Less than \$64,288	\$64,288 to \$128,575	More than \$128,575
3.0% or less	10.0	10.0	10.0
3.0% to 6.0%	9.0	9.5	10.0
6.0% to 9.0%	8.0	8.5	9.0
9.0% to 12.0%	7.0	7.5	8.0
12.0% to 15.0%	6.0	6.5	7.0
15.0% to 18.0%	5.0	5.5	6.0
18.0% to 21.0%	4.0	4.5	5.0
21.0% to 24.0%	3.0	3.5	4.0
24.0% to 27.0%	2.0	2.5	3.0
27.0% to 30.0%	1.0	1.5	2.0
30.0% to 33.0%	0.0	0.5	1.0
33.0% to 36.0%	0.0	0.0	0.5
36.0% or more	0.0	0.0	0.0

Matrix 2b: Income Tax Matrix for Component 2B at the Subnational Level in the United States

Top Marginal Tax Rate	Income Threshold Level (US\$2018)		
	Less than \$64,288	\$64,288 to \$128,575	More than \$128,575
1.5% or less	10.0	10.0	10.0
1.5% to 3.0%	9.0	9.5	10.0
3.0% to 4.5%	8.0	8.5	9.0
4.5% to 6.0%	7.0	7.5	8.0
6.0% to 7.5%	6.0	6.5	7.0
7.5% to 9.0%	5.0	5.5	6.0
9.0% to 10.5%	4.0	4.5	5.0
10.5% to 12.0%	3.0	3.5	4.0
12.0% to 13.5%	2.0	2.5	3.0
13.5% to 15.0%	1.0	1.5	2.0
15.0% to 16.5%	0.0	0.5	1.0
16.5% to 18.0%	0.0	0.0	0.5
18.0% or more	0.0	0.0	0.0

jurisdiction imposes a surcharge for income earners above \$128,575, increasing the top marginal income-tax rate to 13%. In Matrix 2b, even though additional taxes in the form of a surcharge have been imposed, the state's score perversely increases to 3.0 because of the increase in the threshold level.

Our decision to use the federal threshold as the default threshold when the provincial threshold was higher is, frankly, a matter of judgment. Thus, it was important to understand whether this would affect the results significantly. To see whether this was so, we calculated the overall index both ways and found that changes were small and that the overall results were not significantly affected.

Adjustment factors

We faced a common problem in comparing statistics across time, changes in the structure of some series over time. Similarly, some Canadian spending categories were not strictly comparable to those in the United States. This required the use of judgment in some cases. Spending on medical care, for example, is structured as government consumption in Canada and as a set of transfer programs in the United States. Given that the index captures the impact of both government consumption and of transfer programs, we decided the most accurate method of accounting was to reflect the actual nature of the spending, a transfer program in the United States and government consumption in Canada, rather than artificially include one or other in an inappropriate component. The same phenomenon occurs on the revenue side where the entire US Social Security program is funded by a dedicated payroll tax, whereas in Canada part of the similar program, Old Age Security, is funded by general tax revenues. Those revenues are included in variable 2A for US states and in variable 2C for Canadian provinces.

Other adjustments

Our earlier source of government finance data in Canada was discontinued in 2010, with the last year of data being 2009. As a result, in recent years we had used the change in overall aggregates in spending and revenue to produce estimates for the government finance variables in Area 1 and Area 2. The new data series became available in 2015, after the 2015 edition had gone to print. That new data was first incorporated into the 2016 edition. It goes back to 2007. To smooth the transition between the two series, for 2006 we used the average of that new 2007 data and the 2005 data from the previous data series. The two data series are not identical. There were changes in the way that spending and revenue categories were defined. However, this did not create any major changes in the relative rankings of the provinces.

The data for the US states comes from the US Census Bureau. The local government data for 2018 was not scheduled to be released until after this report went to press. As a result, the state and local tax and spending totals for 2018 were not available. However, the state government data *was* available. The change in those state numbers from 2017 to 2018 was applied to the 2017 state and local data to produce a state and local estimate for 2018.

The Tax Foundation calculated the federal tax burden by US state up to the year 2005 using sophisticated techniques but has not issued updates in recent years. As several years of data are missing, we use data on federal tax collections within each state directly from the US Internal Revenue Service.

The historical data for federal spending in the US states comes from the Consolidated Federal Funds Report, which has been discontinued. The last year available is 2010. We used the annual percentage increases in the subnational amounts for the years since 2010 to calculate annual estimates for the federal amounts for both 1A and 1B for those years.

Variable 1C measures insurance and retirement payments as a percentage of income. Because there are several US states where retirees form an abnormally large percentage of the population, using federal spending in each state skews the scores on this variable in a way that does not reflect differences in economic freedom (but rather reflects differences in demographics). In the US states, the US total for this variable, as a percentage of total US income, was used as the federal component for this variable (and simply added to the subnational spending for each state as a percentage of their state income). Since that phenomenon does not exist in Canada and Mexico, this adjustment was not made for the Canadian provinces and Mexican states.

There is a similar issue in the all-government index with regard to Variable 2A, which measures income and payroll taxes. Because states with low corporate income-tax (CIT) burdens tend to attract corporate relocations, those states may tend to have inordinately large revenue from corporate income tax. At the state level, when a corporation has operations in multiple states, taxable corporate income is apportioned based on activity within each state. At the federal level, there are wide disparities in federal CIT revenue collected in the various states (measured as a percentage of personal income) that cannot be driven by differences in state policy. For that reason, we have used the national average in each country for the federal CIT portion of 2A in each state or province.

Variable 2D measures sales and gross receipts taxes. Several Mexican states with large ports have abnormally high values for this variable, in some cases exceeding 100% of personal income. Because that revenue goes to the federal government, we have instead used the same national total for this variable, as a percentage of personal income, for the federal component of this variable for each Mexican state. This adjustment was not necessary for Canada or the United States.

Appendix B

Explanation of Components and Data Sources

Area 1 Government Spending

Component 1A General Consumption Expenditures by Government as a Percentage of Income
General consumption expenditure is defined as total expenditures minus transfers to persons, transfers to businesses, transfers to other governments, and interest on public debt. Spending on fixed capital is also excluded. Data for Quebec is adjusted for Quebec abatement at the subnational level. On the all-government index, there were several Mexican states that were far outliers for this variable and therefore skewed the standardized scores. To account for this, in calculating those scores, we used a lower maximum value of the mean plus 2 standard deviations. (A similar approach is used in the annual reports of *Economic Freedom of the World*.)

Component 1B Transfers and Subsidies as a Percentage of Income

Transfers and subsidies include transfers to persons and businesses like welfare payments, grants, agricultural assistance, food-stamp payments (US), housing assistance. Foreign aid is excluded. Data for Quebec is adjusted for the Quebec abatement at the sub-national level. On the all-government index, there were several Mexican states that were far outliers for this variable and therefore skewed the standardized scores. To account for this, in calculating those scores, we used a lower maximum value of the mean plus 2 standard deviations. (A similar approach is used in *Economic Freedom of the World*.)

Component 1C Insurance and Retirement Payments as a Percentage of Income

Payments by Employment Insurance, Workers Compensation, and various pension plans are included in this component. As explained in Appendix A, for the US states, the federal component of insurance and retirement payment spending (as a percentage of US income) that we use is the same for every state.

Component 1D Government Investment (all-government index only)

When government engages in more of what would otherwise be private investment, economic freedom is reduced. This variable, used only in the all-government index, is the country score for variable 1C in *Economic Freedom of the World: 2020 Annual Report*. A detailed description and the data sources can be found in that report, available at <<https://www.fraserinstitute.org/studies/economic-freedom-of-the-world-2020-annual-report>>.

Area 2 Taxes**Component 2A Income and Payroll Tax Revenue as a Percentage of Income**

Income and Payroll Tax Revenue is defined as the sum of personal income taxes, corporate income taxes, and payroll taxes used to fund social-insurance schemes (i.e., employment insurance, Workers Compensation, and various pension plans). As explained in Appendix A, the federal component of corporate income tax revenue that we use is the same for every state within the same country. Data for Quebec is adjusted for the Quebec abatement at the subnational level.

Component 2Bii Top Marginal Income and Payroll Tax Rate (*all-government index only*)

This variable, used only in the all-government index, is the country score for variable 1Dii in *Economic Freedom of the World: 2020 Annual Report*. A detailed description and data sources can be found in that report, available at <<https://www.fraserinstitute.org/studies/economic-freedom-of-the-world-2020-annual-report>>.

Component 2C Property Tax and Other Taxes as a Percentage of Income

Property and Other Tax revenue consists of total tax revenue minus income and sales tax revenues (which are already included in 2A and 2D). Natural resource royalties and severance taxes are not included in this component. Data for Quebec is adjusted for the Quebec abatement at the subnational level. On the all-government index, there were several Mexican states that were far outliers for this variable that skewed the standardized scores. To account for this, in calculating those scores, we used a lower maximum value of the mean plus 3 standard deviations. (A similar approach is used in *Economic Freedom of the World*.)

Component 2D Sales Tax Revenue as a Percentage of Income

Sales tax revenue includes revenue from all sales and gross receipts taxes (including excise taxes and value-added taxes). As explained in Appendix A, we use the same national average percentage for every state in Mexico. Data for Quebec is adjusted for the Quebec abatement at the subnational level. On the all-government index, several Mexican states were far outliers for this variable and skewed the standardized scores. To account for this, in calculating those scores, we used a lower maximum value of the mean plus 1.5 standard deviations. A similar approach is used in *Economic Freedom of the World*.

Area 3 Regulation

Component 3A Labor Market Freedom

3Ai Minimum Wage Legislation

This component was calculated as minimum wage multiplied by 2,080, which is the full-time equivalent measure of work hours per year (52 weeks multiplied by 40 hours per week) as a percentage of per-capita income. For the Canadian provinces, provincial minimum wage was used to compute both of the indices (subnational and all-government). For US states, the federal minimum wage was used for both indexes

(when it is higher than the state minimum wage) because the federal minimum wage supersedes state minimum wages when it is higher. On all three subnational indexes, there were several states that were far outliers for this variable and therefore skewed the standardized scores. To account for this, in calculating those scores, we used a lower maximum value of the mean plus 3 standard deviations for Canada, the mean plus 4 standard deviations for the United States, and the mean plus 2 standard deviations for Mexico. (A similar approach is used in *Economic Freedom of the World*.)

3Aiii Union Density

For this component, our goal was to determine the relationship between unionization and public policy, other than the level of government employment, which is captured in 3Aii. We regressed union density on the size of the government sector. Data were not available to allow a regression on rural compared to urban populations. The government sector proved highly significant. Thus, the scores were determined holding public-sector employment constant: we calculated the union score by regressing the unionization rate on government employment for each given year using the following equation: $Unionization_i = \alpha + \beta Government_i + residual_i$. Then, we took the estimated intercept, α , and we added it to the residual. We found that this accounts for the decline in unionization rates through time and that the average union scores increase through time to reflect that decline.

Note Data in Area 3 added for the all-government index

The additional data used for the all-government index is from *Economic Freedom of the World: 2020 Annual Report* (Gwartney, Lawson, Hall, and Murphy, 2020), which is also published by the Fraser Institute. Minimum-maximum calculations are based on the 162 nations and territories covered by the world report. This is not ideal, since the minimum-maximum calculations for other components are based on data from the states and provinces. However, since the data were not typically available at the sub-national level, this does provide an appropriate measure of the difference in economic freedom among Canada, the United States, and Mexico. The world data are available at <<https://www.fraserinstitute.org/studies/economic-freedom-of-the-world-2020-annual-report>>.

Area 3 Regulation (*components used in all-government index only*)

Since, as discussed above, Canada and the United States have been diverging on scores for business and credit regulation, the all-government index expands the regulatory area to include data on these areas. Labour regulation becomes one of three equally weighted components of Area 3: Regulation, which comprises 3A: Labour market regulation; 3B: Regulation of credit markets; and 3C: Business regulations. (See Appendix A for how Area 3 is now calculated.)

The descriptions and sources for these components and subcomponents can be found in *Economic Freedom of the World: 2020 Annual Report*, which is available at <<https://www.fraserinstitute.org/studies/economic-freedom-of-the-world-2020-annual-report>>.

Component 3A Labor Market Freedom (component 5B in *Economic Freedom of the World*)

- 3Aiv *Hiring regulations and minimum wage*
- 3Av *Hiring and firing regulations*
- 3Avi *Centralized collective bargaining*
- 3Avii *Hours regulations*
- 3Aviii *Mandated cost of worker dismissal*
- 3Aix *Conscription*

Component 3B Regulation of credit markets (component 5A in *Economic Freedom of the World*)

- 3Bi *Ownership of banks*
- 3Bii *Private sector credit*
- 3Biii *Interest rate controls / negative real interest rates*

Component 3C Business regulations (component 5C in *Economic Freedom of the World*)

- 3Ci *Administrative requirements*
- 3Cii *Bureaucracy costs*
- 3Ciii *Starting a business*
- 3Civ *Impartial public administration*
- 3Cv *Licensing restrictions*
- 3Cvi *Cost of tax compliance*

Area 4 Legal System and Property Rights (Area 2 in *Economic Freedom of the World*)

The descriptions and sources for these components and subcomponents can be found in *Economic Freedom of the World: 2020 Annual Report*, which is available at <<https://www.fraserinstitute.org/studies/economic-freedom-of-the-world-2020-annual-report>>.

- 4A Judicial independence
- 4B Impartial courts
- 4C Protection of property rights

- 4D Military interference in rule of law and politics
- 4E Integrity of the legal system
- 4F Legal enforcement of contracts
- 4G Regulatory restrictions on the sale of real property
- 4H Reliability of police

Area 5 Sound Money (Area 3 in *Economic Freedom of the World*)

The descriptions and sources for these components and subcomponents can be found in *Economic Freedom of the World: 2020 Annual Report*, which is available at <<https://www.fraserinstitute.org/studies/economic-freedom-of-the-world-2020-annual-report>>.

- 5A Money growth
- 5B Standard deviation of inflation
- 5C Inflation: most recent year
- 5D Freedom to own foreign currency bank accounts

Area 6 Freedom to Trade Internationally (Area 4 in *Economic Freedom of the World*)

The descriptions and sources for these components and subcomponents can be found in *Economic Freedom of the World: 2020 Annual Report*, which is available at <<https://www.fraserinstitute.org/studies/economic-freedom-of-the-world-2020-annual-report>>.

- 6A Tariffs
 - 6Ai *Revenue from trade taxes (% of trade sector)*
 - 6Aii *Mean tariff rate*
 - 6Aiii *Standard deviation of tariff rates*
- 6B Regulatory trade barriers
 - 6Bi *Non-tariff trade barriers*
 - 6Bii *Compliance costs of importing and exporting*
- 6C Black-market exchange rates
- 6D Controls of the movement of capital and people
 - 6Di *Financial openness*
 - 6Dii *Capital controls*
 - 6Diii *Freedom of foreigners to visit*

About the Authors

Dean Stansel

Dean Stansel is a Research Associate Professor at the Bridwell Institute for Economic Freedom in the Cox School of Business at Southern Methodist University. He earned his B.A. in economics (with honors) and politics from Wake Forest University and his M.A. and Ph.D. in economics from George Mason University. Before entering academia, Prof. Stansel worked for seven years at the Cato Institute, a public-policy research organization in Washington, D.C., where he produced over 60 publications on fiscal policy issues. In addition to his work on *Economic Freedom of North America*, he is sole author of the Reason Foundation's *U.S. Metropolitan Area Economic Freedom Index*, as well as the author of numerous academic journal articles on a variety of issues in public finance and urban economics. Prof. Stansel's research has been discussed in many publications including the *Wall Street Journal*, *New York Times*, *San Francisco Chronicle*, and *Atlanta Journal-Constitution*; and his commentaries have appeared in the *Wall Street Journal*, *Washington Post*, *Investor's Business Daily*, and *Chicago Tribune*, and *Dallas Morning News*, among others.

José Torra

José Torra is the head of research at *Caminos de la Libertad*, a member of the Economic Freedom Network; its mission is to promote discussion about, and reflection upon, the different aspects of freedom. He holds a degree in economics from the *Universidad Nacional Autónoma de México*, Mexico City. He is also the author of the book, *Jonestown: Religión y Socialismo*, published by the Friedrich Naumann Foundation.

Fred McMahon

Fred McMahon is the Dr. Michael A. Walker Chair of Economic Freedom Research at the Fraser Institute. He manages the Economic Freedom of the World Project and examines global issues, such as development, trade, governance, and economic structure; and coordinates the Economic Freedom Network, an international alliance of independent think tanks in nearly 90 nations and territories. He holds an M.A. in Economics from McGill University, Montreal. Mr McMahon is the author of numerous research articles and several books, including *Looking the Gift Horse in the Mouth: The Impact of Federal Transfers on Atlantic Canada*, which won the Sir Antony Fisher International Memorial Award for advancing public-policy debate, *Road to Growth: How Lagging Economies Become Prosperous*, and *Retreat from Growth: Atlantic Canada and the Negative Sum Economy*. He has written for numerous publications,

including the *European Journal of Political Economy*, the *SAIS Journal* (School of Advanced International Studies, Johns Hopkins University), the *Wall Street Journal*, *Policy Options*, *National Post*, *Time* (Canada), *Globe & Mail*, *Ottawa Citizen*, and most other major Canadian newspapers.

Acknowledgments

The authors would like to thank the Charles Koch Foundation, the Sarah Scaife Foundation, and the Searle Freedom Trust for their support of this project. We are also grateful to Robert Lawson and the Bridwell Institute for Economic Freedom at the Southern Methodist University (SMU) Cox School of Business for hosting and co-sponsoring with the Charles Koch Foundation the annual meeting of the Economic Freedom of North America Network .

As well, we are highly appreciative of the work of Fraser Institute Senior Fellow Alan Dowd, who continues to expand our network of US-based policy research organizations (see pp. 83–93). Starting with 10 partners in nine states in 2014, our EFNA Network now comprises 58 full partners in 44 states, Canada, and Mexico. We are grateful to the members of our EFNA Network for their efforts in promoting the index in their states, using the index in their research, hosting EFNA authors for presentations, and participating in planning conferences.

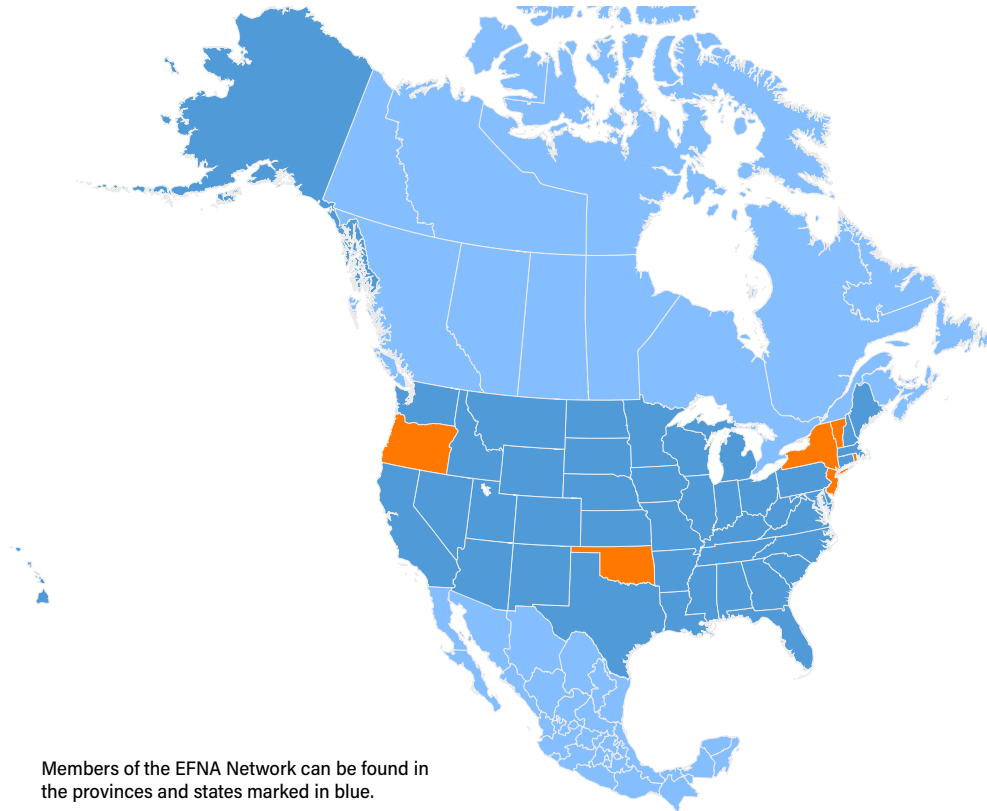

The authors thank Michael Walker, Steven Easton, Robert Lawson, James Gwartney, and Dexter Samida for their help in developing the methodology for this report. We thank Amela Karabegović for her involvement in this project as principal author of earlier additions.

Dean Stansel is grateful to Meg Tuszynski, Research Fellow and Assistant Director at the Bridwell Institute for Economic Freedom at Southern Methodist University in Dallas, for her help in compiling the list of articles citing *Economic Freedom of North America* in Appendix C and performing various related tasks. We also thank Mirna Ponce, Research Fellow at Caminos de la Libertad, for her overall assistance with the Mexican index.

Any remaining errors and omissions of this report are the responsibility of the authors. The opinions expressed by the authors are their own and do not necessarily reflect those of the Fraser Institute, its Board of Directors, its donors and supporters, or its staff. This publication in no way implies that the Fraser Institute, its directors, or staff are in favor of, or oppose the passage of, any bill; or that they support or oppose any particular political party or candidate.

Our EFNA Network

The Fraser Institute is proud to partner with a network of organizations across North America in promoting *Economic Freedom of North America* (EFNA), our report on economic freedom in the United States, Canada, and Mexico. Our EFNA Network partners co-publish the report, host EFNA-related events, use the report in their own research and publications, and disseminate the report to policy makers and media outlets in their states and regions.

Members of the EFNA Network can be found in the provinces and states marked in blue.

Canada

Canada *Fraser Institute*

Our mission is to improve the quality of life for Canadians, their families and future generations by studying, measuring, and broadly communicating the effects of government policies, entrepreneurship, and choice on their well-being. Founded in 1974, we are an independent research and educational organization with locations throughout North America and international partners in over 90 countries. Our work is financed by tax-deductible contributions from thousands of individuals, organizations, and foundations. In order to protect its independence, the Institute does not accept grants from government or contracts for research.

Vancouver, Canada • fraserinstitute.org

Mexico

Mexico *Caminos de la Libertad*

Caminos de la Libertad seeks to promote discussion and reflection about the different aspects of freedom. We strive to generate critical thinking and policies as well as creating awareness among those who have not yet realized the value of their own freedom. Caminos de la Libertad has become an international effort that includes competitions, symposiums, conferences, and round-table discussions emphasizing the importance of freedom. With our different activities, we try to introduce academics, politicians, youth, and the general society to the liberal perspective.

Mexico City, Mexico • caminosdelalibertad.com

United States

Alabama *Manuel Johnson Center for Political Economy at Troy University*

The Manuel H. Johnson Center for Political Economy at Troy University provides a dynamic and rigorous education program focused on the moral imperatives of free markets and individual liberty, as well as relevant policy research on current and local issues.

Troy, Alabama • troy.edu/academics/colleges-schools/business/johnson-center/index.html

Alaska *Alaska Policy Forum*

The Alaska Policy Forum conducts timely, relevant, and accurate research and provides free-market, Alaskan solutions in the most effective means possible to policy makers at the state and local level. We believe that individual freedom and private property are inextricably linked. We believe that government should be limited, transparent, and accountable. We believe in responsible, sustainable development. We believe that free markets offer better solutions than government planning.

Anchorage, Alaska • www.alaskapolicyforum.org

Arizona *Center for the Philosophy of Freedom at the University of Arizona*

The Center's mission is to promote the understanding and appreciation of the ideals of freedom and responsibility along four dimensions: published research, undergraduate education, graduate education, and community outreach.

Tucson, Arizona • freedomcenter.arizona.edu

Center for the Study of Economic Liberty at Arizona State University

Committed to the study of the role economic liberty and the free-enterprise system play in increasing opportunity and improving well-being, the Center for the Study of Economic Liberty seeks to advance our understanding through independent thinking, scholarly debate, factual argument, and clear, honest communication of research and policy findings. The Center is a non-partisan academic unit within the W. P. Carey

School of Business at Arizona State University; our scholars enjoy academic freedom and share with each other a basic commitment to a freer, more prosperous world. Founded in 2014, the Center for the Study of Economic Liberty is dedicated to serving students and the public through research, education, and community outreach on the most pressing national and international economic policy issues.

Tempe, Arizona • cseel.asu.edu/

Arkansas *University of Central Arkansas, Center for Research in Economics*

The vision and hope of faculty, staff, and supporters of the Arkansas Center for Research in Economics (ACRE) is greater human well-being—a society in which everyone lives the best, most rewarding life possible, as defined by each individual. ACRE’s four primary areas of economic research are regulations that inhibit earning a living, transparency and efficient governance, unleashing entrepreneurship, and public education.

Conway, Arkansas • uca.edu/acre

California *Independent Institute*

The Independent Institute is a non-profit, non-partisan, public-policy research and educational organization that shapes ideas into profound and lasting impact. The mission of Independent is to boldly advance peaceful, prosperous, and free societies grounded in a commitment to human worth and dignity. Applying independent thinking to issues that matter, we create transformational ideas for today’s most pressing social and economic challenges. The results of this work are published as books and other publications and form the basis for numerous conference and media programs. By connecting these ideas with organizations and networks, we seek to inspire action to unleash an era of unparalleled human flourishing at home and around the globe.

Oakland, California • www.independent.org

Colorado *Independence Institute*

The mission of the Independence Institute is to empower individuals and to educate citizens, legislators, and opinion makers about public policies that enhance personal and economic freedom.

Denver, Colorado • www.i2i.org

Woodford Foundation for Limited Government

We are a private foundation located in Colorado Springs. Our primary interest is to be persuasive in restoring the “Opportunity Society” by (a) promoting a gradual and significant reduction in the size and scope of both federal and state governments, (b) working as part of the Bastiat Society to influence business owners to be “Principled Wealth Creators,” and (c) encouraging business and the general electorate to endorse both our Profit Sharing and Vouchers for Delivery of Social Services and Free Enterprise and True Responsible Capitalism statements.

Colorado Springs, Colorado • woodfordfoundation.org

Connecticut *Yankee Institute for Public Policy*

The Yankee Institute develops and advances free-market, limited-government solutions in Connecticut. As one of America's oldest state-based think tanks, Yankee is a leading advocate for smart, limited government; fairness for taxpayers; and an open road to opportunity.

Hartford, Connecticut • yankeeinstitute.org

Delaware *Caesar Rodney Institute*

The Caesar Rodney Institute is an independent, non-profit, non-partisan public policy research institute committed to protecting individual liberty.

Newark, Delaware • caesarrodney.org

Florida *James Madison Institute*

The James Madison Institute is a Florida-based research and educational organization engaged in the battle of ideas. The Institute's ideas are rooted in a belief in the US Constitution and such timeless ideals as limited government, economic freedom, federalism, and individual liberty coupled with individual responsibility. The Institute's mission is to keep the citizens of Florida informed about their government and to shape our state's future through the advancement of practical free-market ideas on public-policy issues.

Tallahassee, Florida • www.jamesmadison.org

Georgia *Georgia Public Policy Foundation*

The Georgia Public Policy Foundation is a 501(c)(3) non-profit, non-partisan research institute. Our mission is to improve the lives of Georgians through public policies that enhance economic opportunity and freedom. We believe good public policy is based upon fact, an understanding of sound economic principles, and the core principles of our free-enterprise system—economic freedom, limited government, personal responsibility, individual initiative, respect for private property and the rule of law.

Atlanta, Georgia • georgiapolicy.org

Hawaii *Grassroot Institute of Hawaii*

The Grassroot Institute of Hawaii is an independent, non-profit, research and educational institution devoted to promoting the principles of individual liberty, free markets, and limited and accountable government throughout the state of Hawaii and the Pacific Rim.

Honolulu, Hawaii • grassrootinstitute.org

Idaho *Idaho Freedom Foundation*

Our goal is to hold public servants and government programs accountable, expose government waste and cronyism, reduce Idaho's dependency on the federal government, and inject fairness and predictability into the state's tax system.

Boise, Idaho • idahofreedom.org

Illinois *Illinois Policy Institute*

Illinois Policy is an independent organization generating public-policy solutions aimed at promoting personal freedom and prosperity in Illinois. We believe Illinois should be a place where people of all talents, interests, and cultural backgrounds can succeed with hard work and ingenuity. We want families to feel confident in planting their roots in Illinois soil. And, we want to live in a state where communities flourish and good opportunities abound.

Springfield/Chicago, Illinois • illinoispolicy.org

Indiana *Sagamore Institute*

The Sagamore Institute is an Indianapolis-based non-profit, non-partisan, public-policy research organization—or think tank. It is our mission to research, analyze, and respond to difficult issues, to serve as a meeting place for disparate groups, and to offer wise counsel for a world in progress.

Indianapolis, Indiana • www.sagamoreinstitute.org

Iowa *Tax Education Foundation of Iowa*

The Tax Education Foundation educates the general public about the tax and spending practices of state and local government in Iowa. We also compile research on fiscal topics and provide state by state comparative data. The Tax Education Foundation distributes this research through publications, social media, speaking engagements, and our website.

West Des Moines, Iowa • taxeducationfoundation.org

Kansas *Kansas Policy Institute*

Kansas Policy Institute is an independent think tank guided by the constitutional principles of limited government and personal freedom. We specialize in student-focused education and tax and fiscal policy at the state and local level, empowering citizens, legislators, and other government officials with objective research and creative ideas to promote a low-tax, pro-growth environment that preserves the ability of governments to provide high-quality services.

Wichita, Kansas • kansaspolicy.org

Kentucky *Pegasus Institute*

Our mission is to provide public-policy research and solutions that help improve the lives of all Kentuckians. Pegasus Institute operates as an independent, non-partisan, privately funded research organization focused on state and local policies. We believe that Kentucky has the potential to emerge as a national leader and a beacon of the New South. That potential can be unlocked with data-driven public-policy solutions based in free-market principles, individual liberty and responsibility, and effective, limited, and accountable government.

Minnesota *Center of the American Experiment*

The Center of the American Experiment is Minnesota’s leading public-policy organization. The Center researches and produces papers on Minnesota’s economy,

education, health care, the family, employee freedom, and state and local governance. It also crafts and proposes creative solutions that emphasize free enterprise, limited government, personal responsibility, and government accountability.

Golden Valley, Minnesota • www.americanexperiment.org

Mississippi *Institute for Market Studies at Mississippi State University*

The Institute for Market Studies supports the study of markets and provides a deeper understanding regarding the role of markets in creating widely shared prosperity. The Institute brings together leading scholars in economics, finance, and international business. Research interests include analysis of the market process, corporate control, bureaucracy and regulation theory, shadow economies, and informal institutions. Research questions are motivated by current economic and financial issues.

Mississippi State, Mississippi • <http://www.ims.msstate.edu>

Mississippi Center for Public Policy

The Mississippi Center for Public Policy (MCPPI) is an independent, non-profit, public-policy organization based in Jackson, Mississippi. MCPPI works to promote and protect the concepts of free markets, limited government, and strong traditional families.

Jackson, Mississippi • mspolicy.org

Missouri *Hammond Institute for Free Enterprise at Lindenwood University*

The John W. Hammond Institute for Free Enterprise is a research and education center in the Plaster School of Business and Entrepreneurship at Lindenwood University. Its mission is to foster free enterprise and civil and religious liberty through the examination of market-oriented approaches to economic and social issues. This mission is based on the view that a limited government, such as that laid out in the Constitutional foundation of the United States, is a necessary component of a just and prosperous society.

St. Charles, Missouri • hammondinstitute.org

Montana *Montana Policy Institute*

The mission of the Montana Policy Institute is to form, equip, and mobilize a network of citizens dedicated to securing a free and prosperous future for Montana. We believe Montana should be a place where Montanans can live, work, and prosper, and that pro-liberty policies are the best and surest route to achieving this goal.

Helena, Montana • montanapolicy.org

Nebraska *Institute for Economic Inquiry at Creighton University*

The Institute for Economic Inquiry supports research and education programs analyzing, and initiating conversations about, the institutions that promote human well-being. Through the Institute, social scientists and practitioners work together to define the characteristics of a free society, and then critically examine the impact

of policy on human flourishing. The Institute supports research that compares and contrasts economic and social outcomes from the perspectives of economics, ethics, and entrepreneurship and their diverse methodologies.

Supporting the Fraser Institute

To learn how to support the Fraser Institute, please contact us via post: Development Department, Fraser Institute, Fourth Floor, 1770 Burrard Street, Vancouver, British Columbia, V6J 3G7, Canada • telephone: toll-free to 1.800.665.3558, ext. 548 • e-mail: development@fraserinstitute.org • or visit our web page: <www.fraserinstitute.org/support-us/overview.aspx>.

Purpose, Funding, and Independence

The Fraser Institute provides a useful public service. We report objective information about the economic and social effects of current public policies, and we offer evidence-based research and education about policy options that can improve the quality of life.

The Institute is a non-profit organization. Our activities are funded by charitable donations, unrestricted grants, ticket sales, and sponsorships from events, the licensing of products for public distribution, and the sale of publications.

All research is subject to rigorous review by external experts, and is conducted and published separately from the Institute's Board of Trustees and its donors.

The opinions expressed by the authors are those of the individuals themselves, and do not necessarily reflect those of the Fraser Institute, its Board of Directors, its donors and supporters, or its staff. This publication in no way implies that the Fraser Institute, its directors, or staff are in favour of, or oppose the passage of, any bill; or that they support or oppose any particular political party or candidate.

As a healthy part of public discussion among fellow citizens who desire to improve the lives of people through better public policy, the Institute welcomes evidence-focused scrutiny of the research we publish, including verification of data sources, replication of analytical methods, and intelligent debate about the practical effects of policy recommendations.

Peer Review

Validating the accuracy of our research

The Fraser Institute maintains a rigorous peer review process for its research. New research, major research projects, and substantively modified research conducted by the Fraser Institute are reviewed by a minimum of one internal expert and two external experts. Reviewers are expected to have a recognized expertise in the topic area being addressed. Whenever possible, external review is a blind process.

Commentaries and conference papers are reviewed by internal experts. Updates to previously reviewed research or new editions of previously reviewed research are not reviewed unless the update includes substantive or material changes in the methodology. The review process is overseen by the directors of the Institute's research departments who are responsible for ensuring all research published by the Institute passes through the appropriate peer review. If a dispute about the recommendations of the reviewers should arise during the Institute's peer review process, the Institute has an Editorial Advisory Board, a panel of scholars from Canada, the United States, and Europe to whom it can turn for help in resolving the dispute.
